The Rights and Obligations of States in Disputed Maritime Areas: What Lessons Can Be Learned from the Maritime Boundary Dispute between Ghana and Côte d'Ivoire?

*Dr. Youri van Logchem**

ABSTRACT

*Unilateral acts undertaken in disputed maritime areas, particularly in relation to mineral resources, frequently lead to conflict between states. Appraisals of the scope that remains for unilateralism in disputed maritime areas under international law exist in both case law and literature, but the precise scope remains shrouded in doubt. The ruling of the tribunal in *Guyana v. Suriname*—building its argumentation extensively on that of the International Court of Justice (ICJ or Court) in the Aegean Sea Continental Shelf (interim measures)—is significant in this regard, clarifying, at least to a certain extent, the scope for unilateral conduct. Recently, in September 2017, in the maritime boundary dispute between Ghana and Côte d'Ivoire, a Special Chamber of the International Tribunal for the Law of the Sea (ITLOS) addressed the lawfulness of unilateral conduct by Ghana in a disputed maritime area. The Ghana/Côte d'Ivoire judgment throws a completely different light on the matter, compared to this earlier case law, making revisiting the topic of what the rights and obligations of states are in disputed maritime areas highly necessary and topical.*

I. INTRODUCTION

Frequently, states unilaterally undertake acts in disputed maritime areas in relation to mineral resources. This might involve a broad spectrum of categories of acts that are different in nature and aim: for example, acts paving the way for activities related to mineral resources to proceed through concessioning; activating these concessions; conducting seismic work to map out the mineral resource potential in a disputed maritime area; undertaking exploratory drilling to assess whether earlier located deposits are commercially viable; and appropriating mineral resources through exploitation.¹ Along this range of conduct, different measures of damage will be caused to the marine environment.² These acts, when undertaken unilaterally, regularly engender conflict between claimant states; however, the exact measure thereof varies with the specific situation and the type of conduct concerned.³ It is not easy to answer the question of what unilateral acts can be lawfully undertaken in disputed maritime areas in relation to mineral resources from the perspective of international law—perhaps inherently so, due to the fact that the circumstances surrounding a particular disputed maritime area are entwined with determining this scope.⁴ Scholars also continue to puzzle over this issue.⁵

The most recent addition to the case law relevant to the issue of unilateralism in disputed maritime areas is the judgment on the

Schofield, Seokwoo Lee & Moon-Sang Kwon eds., 2014) [hereinafter *Van Logchem Unilateralism*].

4. See Van Logchem *Unilateralism*, *supra* note 3, at 196–97 (“There thus remains a fair amount of uncertainty as to what scope is left for the unilateral conduct of activities by States in areas of overlapping maritime claims, that are not covered by provisional arrangements.”).

5. See, e.g., BRITISH INST. OF INT'L & COMP. LAW, REPORT ON THE OBLIGATIONS OF STATES UNDER ARTICLES 74(3) AND 83(3) OF UNCLOS IN RESPECT OF UNDELIMITED MARITIME AREAS 18 (2016), www.biicl.org/documents/1192_report_on_the_obligations_of_states_under_articles_743_and_833_of_unclos_in_respect_of_undelimited_maritime_areas.pdf?showdocument=1 [https://perma.cc/FN5D-YG6R] (archived Nov. 7, 2018) [hereinafter *BIICL REPORT*].

merits in the dispute between Ghana and Côte d'Ivoire (*Ghana/Côte d'Ivoire*) that was handed down by a Special Chamber of ITLOS (Special Chamber or Chamber) on September 23, 2017.⁶ Also relevant in this regard is the interim measures order that was delivered by ITLOS previous thereto, on April 25, 2015.⁷

More specifically, this Article will seek to analyze to what extent *Ghana/Côte d'Ivoire* has made a positive contribution on two issues: first, the interpretation of paragraph 3 of Article 83 of the United Nations Convention on the Law of the Sea (LOSC or Convention) as such, predominantly the obligation to not hamper or jeopardize continental shelf delimitation, given that it figured quite heavily in this case; and, second—which is, to a certain extent, intermingled with the first issue—the issue of what the rights and obligations of states are in relation to mineral resources within disputed maritime areas on the basis of *Ghana/Côte d'Ivoire*.

In addition, an alternative line of inquiry will be considered: the question of whether, in relation to the remaining scope for unilateralism in disputed maritime areas, there has been a blurring of the distinction between lawful and unlawful unilateral acts because of how the Chamber in *Ghana/Côte d'Ivoire* framed its reasoning and the conclusions it reached in relation thereto. There is a general caveat in relation to the scope remaining for unilateralism in disputed waters concerning mineral resources under international law: it has never fully crystallized.⁸ After analyzing the case law rendered before *Ghana/Côte d'Ivoire*, it could be stated with greater certainty that unilateral conduct causing irreparable prejudice to rights would be prohibited in a disputed maritime area.⁹ However, the judgment of the Special Chamber in *Ghana/Côte d'Ivoire*, discussed in Part V.C., raises some fundamental questions regarding the state of international law in relation to unilateral conduct in disputed maritime areas.¹⁰

6. See generally *Dispute Concerning Delimitation of the Maritime Boundary between Ghana and Côte d'Ivoire in the Atlantic Ocean (Ghana/Côte d'Ivoire)*, Case No. 23, Judgment of Sept. 23, 2017, 17 ITLOS Rep. 1 [hereinafter *Ghana/Côte d'Ivoire (Judgment)*].

Jayakumar, Tommy Koh & Robert Beckman eds., 2014); Van Logchem *Unilateralism*, *supra* note 3, at 195–97 (“It remains, however, impossible to provide a specific set of norms defining the scope for unilateral activities in disputed maritime areas that can find application in all cases.”).

9. See, e.g., Rainer Lagoni, *Interim Measures Pending Maritime Delimitation Agreements*, 78 AM. J. INT'L L. 345, 366 (1984) (“One can thus infer that any activity which represents an irreparable prejudice to the final delimitation agreement...would doubtless be prohibited under paragraph 3 of Articles 74/83[.]”).

10. See *infra* Part V.C.

In terms of organization, this Article is divided into two parts. The first Part will offer a more general introduction to the topic at hand, while Part II will discuss unilateralism in disputed maritime areas. Attention will be first directed towards disputed territorial sea, exclusive economic zone (EEZs), and continental shelf areas as general phenomena. This is necessary because the Special Chamber in *Ghana/Côte d'Ivoire* was called upon to effect a delimitation of these maritime zones conjointly. After shortly describing how disputed maritime areas came into being and can be dealt with, the international legal framework applicable to these areas in the period prior to delimitation will be laid out. Relevant in this regard are Articles 15, 74, and 83 of the LOSC.¹¹ Special emphasis will be placed on paragraph 3 of Article 83 of the LOSC, dealing with disputed continental shelf areas and fulfilling a central role in the argumentation of Côte d'Ivoire, as described in particular in Parts IV.A and V.A; the modalities of this paragraph will be laid out in Parts III.B–III.E. Paragraph 3 reads, in full, as follows:

Pending agreement as provided for in paragraph 1, the States concerned, in a spirit of understanding and cooperation, shall make every effort to enter into provisional arrangements of a practical nature and, during this transitional period, not to jeopardize or hamper the reaching of the final agreement. Such arrangements shall be without prejudice to the final delimitation.¹²

Two cases, respectively dealt with by the ICJ and an arbitral tribunal and delivering their decisions some three decades apart, have contributed to a more advanced understanding of how to interpret the rules and obligations of international law that are relevant in pinpointing the existing scope for unilateralism in disputed EEZ and continental shelf areas: that is, in 1976 in *Aegean Sea Continental Shelf (interim measures)* and in 2007 in *Guyana v. Suriname*.¹³ Both cases involved disputed maritime areas, in which acts in relation to mineral resources were undertaken unilaterally, and against which one of the parties to the dispute protested. *Guyana v. Suriname* will be looked at as to how paragraph 3 of Article 83 of the LOSC has been understood in this case. Also, the ICJ's decision in *Aegean Sea Continental Shelf (interim measures)* will be analyzed. In its award in *Guyana v. Suriname*, the tribunal attributed a central role to what the ICJ held in the aforementioned interim measures procedure in interpreting paragraph 3.¹⁴ *Guyana v. Suriname* has been argued, wrongly in the view of this author, to have resolved the conundrum of

14. See Van Logchem *Unilateralism*, *supra* note 3, at 181–83, 186–91.

what scope is reserved for unilateralism in relation to mineral resources within disputed EEZ/continental shelf areas.¹⁵ Although the decision in *Guyana v. Suriname*, heavily building on the ICJ's ruling in *Aegean Sea Continental Shelf (interim measures)*, can be applauded for clarifying, to a certain extent, the scope for unilateral acts relating to mineral resources, the award and the reasoning of the tribunal has tended to provoke questions of its own. One of these questions is the extent to which it is appropriate to apply, by analogy, the findings of this tribunal to disputed maritime areas in a general sense and, thus, to consider it to be the final word on what scope remains for unilateralism in disputed maritime areas.¹⁶

An important aspect to *Ghana/Côte d'Ivoire* is that Ghana was on the verge of starting to produce oil from previously drilled wells.¹⁷ Questions about the lawfulness of the unilateral acts by Ghana already rose to the fore in the interim measures phase.¹⁸ The primary measure of interim protection sought from the Special Chamber was to order Ghana to put all mineral resource activity within the disputed area on hold prior to delimitation.¹⁹ An important motivation for Côte d'Ivoire to take this position was as follows: through the unilateral acts of Ghana, the exclusivity of its sovereign rights over the continental shelf was infringed upon to an extent that the resulting damage was irreparable.²⁰ In formulating this argument, Côte d'Ivoire relied heavily on the obligation incumbent on Ghana to not hamper or jeopardize the final delimitation of a disputed continental shelf area, which is contained in paragraph 3 of Article 83 of the LOSC.²¹ During the merits phase, this line of argument was repeated by Côte d'Ivoire.²² As a result, the Chamber was called upon to interpret the wide and diversified range of unilateral conduct by Ghana in relation

to the disputed continental shelf area, *inter alia*, through the lens of paragraph 3.²³ New light is shone by the final judgment of the Special Chamber on the content of the obligation to not hamper or jeopardize. Standing in the way of a more elaborate analysis of this paragraph, however, was the way in which Côte d'Ivoire committed its submissions on this point to paper, as discussed in Part V.C.

The second Part of the Article will closely analyze the specifics of the dispute between Ghana and Côte d'Ivoire. It will look at the arguments presented by the parties to the dispute, both in the phase of the interim measures, in Parts IV.A–IV.B, and on the merits in Part V. In both phases, arguments were presented by both sides to the dispute about the (un)lawfulness of the unilateral conduct in the disputed maritime area. Yet, an important difference was that the states concerned approached this issue from very different angles. The conclusions arrived at by the Special Chamber in these respective stages in relation to the (un)lawfulness of this unilateral conduct will also be discussed in Parts IV.C and V.C.

After discussing the intricacies of this dispute, the findings of the Special Chamber will be placed in a broader context, by applying them to the questions that lie at the core of this contribution: that is, was a better understanding offered of the meaning of paragraph 3 of Article 83 in the LOSC, or more broadly, in relation to the issue of what the rights and obligations of states are concerning disputed maritime areas, specifically in relation to mineral resources?

II. DISPUTED MARITIME AREAS AND UNILATERALISM

Disputed maritime areas were inevitably created due to the proximity of certain coasts of states, combined with the expansion of entitlements to maritime zones up to at least two hundred nautical miles (nm) in the form of the EEZ and continental shelf, and the extension of the breath of the territorial sea to twelve nm.²⁴ Disputed maritime areas are those areas where neighboring states have advanced *overlapping* claims to maritime zones, be it the territorial sea, EEZ, (extended) continental shelf, or a combination thereof. Areas of this type are voluminous in the international landscape.²⁵ For instance, African states have completed a little over half of the amount

24. ROBIN R. CHURCHILL & VAUGHAN LOWE, *THE LAW OF THE SEA* 147–48 (3d ed. 1999); Anderson & Van Logchem, *supra* note 8, at 192–95.

25. Husain M. Al Baharna, *Legal Implications of Maritime Boundary Disputes (With Special Reference to the Gulf)*, 68 Y.B. ISLAMIC & MIDDLE E. L. 68, 70 (1994); Clive H. Schofield, *Ever More Lines in the Sea: Advances in the Spatial Governance of Marine Space*, in *OCEAN LAW AND POLICY: 20 YEARS UNDER UNCLOS* 387, 398–99 (Carlos Espósito et al. eds., 2016).

of delimitation exercises they can go through in total; however, some of these concern boundaries that have been partially delimited, but leave the remainder undefined.²⁶

Disputed maritime areas can create different levels of conflicts between coastal states having overlapping claims, ranging from no problems arising between them to disputes being frequent. Undertaking unilateral acts in connection with mineral resources in a disputed maritime area is particularly prone to prompting a response from the other claimant state. Two ways can be identified as to how claimant states can respond to unilateral conduct:²⁷ protesting and taking physical action.²⁸ Yet, there are fundamental differences between these types of responses: protesting (e.g., through diplomatic channels) is a lower intensity response than formulating a physical reaction (e.g., through sending navy vessels to the area concerned in an attempt to put a halt to unilateral conduct).²⁹ Giving a reaction to a unilateral act may be called for in certain circumstances and might prevent a state from being confronted with the argument that by staying silent it has acquiesced in the lawfulness of that conduct; or, alternatively, in the claim of the other state over the area.³⁰ An example illustrating the importance of giving some response is the dispute currently under consideration, with Ghana contending that through Côte d'Ivoire's silence in connection with the disputed area, and the related conduct set in motion therein, it acquiesced in an equidistance boundary line.³¹

Article 15 of the LOSC is the relevant provision in case overlapping territorial sea claims arise. It contains the following

26. BIICL REPORT, *supra* note 5, at 85.

27. See Van Logchem *Unilateralism*, *supra* note 3, at 175 (saying neighboring states usually feel compelled to respond to unilateral activities conducted in a disputed maritime area).

28. Youri van Logchem, *Exploration and Exploitation of Oil and Gas Resources in Maritime Areas of Overlap: the Falklands (Malvinas)*, 28 HAGUE Y.B. INT'L L. 29, 38 (2017) [hereinafter van Logchem *Exploration*].

29. For example, after Guyana allowed an oil rig to be placed within a disputed maritime area, to commence with exploratory drilling, Suriname put a halt to this conduct by sending its naval vessels. The tribunal concluded that Suriname breached Article 2(4) of the United Nations Charter and general international law. It was particularly held against Suriname, that it issued an ultimatum: the rig would need to "leave the area at once, or the consequences will be yours." See *Guyana v. Suriname*, 30 R.I.A.A. 1, ¶¶ 445, 476 (Perm. Ct. Arb. 2007).

30. M. Shah Alam & A. Al Faruque, *The Problem of Delimitation of Bangladesh's Maritime Boundaries with India and Myanmar: Prospects for a Solution*, 25 INT'L J. MARINE & COASTAL L. 405, 408–09 (2010).

31. Another example is that silence on the part of Turkey was construed by Greece in *Aegean Sea Continental Shelf* as coming to the former's detriment, in that it acquiesced in Greece's continental shelf claim. See, e.g., *Aegean Sea Continental Shelf Case (Greece v. Turk.)*, Request for the Indication of Interim Measures of Protection, Order, 1976 I.C.J. Rep. 3, 36–37 (Sept. 11) (Stassinopoulos, J., dissenting) ("Turkey never protested against that exercise and never claimed any rights whatever over the Greek continental shelf."); see *infra* Part V.B.

delimitation rule: the territorial sea boundary is the equidistance line, unless another line is justified by a special circumstance or historic title.³² This same solution applies in the shape of an interim rule to the period preceding delimitation of the disputed territorial sea area, with the same caveat: no historic title or special circumstance can be in play.³³ In the absence of historic title or special circumstances, the equidistance line would signify the outer point up to which a claimant can exercise sovereignty prior to delimitation.

Beyond the outer limit of the territorial sea, the EEZ and the continental shelf will enter into the picture. Disputes concerning EEZ and continental shelf areas arise regularly in the international landscape. In fact, the majority of disputed areas remaining outstanding today involve one or a combination of these two maritime zones.³⁴ States can delimit their disputed EEZ or continental shelf area by way of a negotiated boundary agreement between the coastal states or through a delimitation effected by an international court or tribunal.³⁵ Paragraph 1 of Articles 74 and 83 of the LOSC contains the basic rules governing the delimitation of overlapping EEZ or continental shelf claims: the ultimate boundary has to be equitable.³⁶ These identical provisions have been regularly criticized for providing limited guidance to states having overlapping claims.³⁷ However, this has not prevented states from reaching delimitation agreements successfully; moreover, practice in this regard continues to expand.³⁸ Another option for the states concerned is bringing a disputed EEZ or continental shelf area under the reach of a cooperative arrangement. Most of these arrangements can be considered provisional arrangements in the sense of paragraph 3 of Articles 74 and 83 of the LOSC.³⁹

39. For example, the preamble to a provisional arrangement concluded between Algeria and Tunisia, establishing a provisional maritime boundary between the coasts of the two States, explicitly refers to paragraph 3 of articles 74 and 83 of the LOSC. *See*

There are concurrent claims of coastal states to sovereignty (concerning the territorial sea), or sovereign rights (pertaining to the EEZ or continental shelf), with regard to the same maritime area prior to its delimitation.⁴⁰ However, the entitlements to maritime zones and related sovereignty, sovereign, or jurisdictional rights of coastal states over a disputed maritime area already exist prior to delimitation.⁴¹ In a way, the area of overlapping claims appertains to all of the claimants involved prior to delimitation, or so it has been argued.⁴² However that may be, there may be *uncertainty* over the extent to which states can *exercise* their rights in relation to disputed maritime areas.⁴³ But there is an important difference between the EEZ and the continental shelf.⁴⁴ The sovereign rights coastal states have over the continental shelf are inherent and exist *ab initio* and *de jure*.⁴⁵ This is not the case concerning the EEZ: rights are created by making an explicit claim to an EEZ.⁴⁶ Usually, the aspect of inherency of states' rights over the continental shelf has been argued to imply that sovereign rights automatically cover the mineral resources embedded therein.⁴⁷ Interestingly, the Special Chamber's reasoning in the judgment on the merits in *Ghana/Côte d'Ivoire* seems to be at odds herewith, raising the suggestion that delimitation is *constitutive* of rights.⁴⁸

48. Dispute Concerning Delimitation of the Maritime Boundary between Ghana and Côte d'Ivoire in the Atlantic Ocean (Ghana/Côte d'Ivoire), Case No. 23, Judgment of Sept. 23, 2017, 17 ITLOS Rep. 1, ¶ 591; see *infra* Part VI.

III. DISPUTED MARITIME AREAS: THE INTERNATIONAL LEGAL FRAMEWORK

For some time, the waters located off the adjacent coasts of Ghana and Côte d'Ivoire have been known to contain significant deposits of mineral resources.⁴⁹ Tullow Oil, having its primary seat in London, was the petroleum company primarily concessioned by Ghana to conduct a variety of exploratory and exploitative work related to mineral resources in the disputed maritime area.⁵⁰ Significant amounts of deposits were struck in several locations of the disputed area: fields showing particular promise were Jubilee field and Tweneboa, Enyenra, and Ntomme (these are colloquially known as "TEN").

It is difficult to pinpoint with precision when the dispute over the maritime boundary materialized between the two states. Complicating this is Côte d'Ivoire's inactivity in relation to the area concerned, at least for some period of time.⁵¹ According to Ghana, Côte d'Ivoire's silence spanned several decades,⁵² which fed the Ghana's belief that Côte d'Ivoire had agreed that those parts located on Ghana's side of an equidistance boundary, including those rich in mineral resources, belonged to Ghana.⁵³ At some point in time, according to Ghana in 2011,⁵⁴ Côte d'Ivoire actively started to claim areas beyond the equidistance boundary line in relation to which Ghana had begun extensive mineral resource activities.⁵⁵ Ghana's activities required making significant previous investments (e.g., in connection with enabling installations to move into position, and their operation coming at great cost).⁵⁶ This made clear that the oil companies were heavily invested in the area. In this light, it was seriously important for Ghana that the Chamber would determine that the disputed areas concerned would be on Ghana's side of the boundary after delimitation.

Written Statement of Ghana, Request for the Prescription of Provisional Measures Submitted by the Republic of Côte d'Ivoire, Dispute Concerning Delimitation of the Maritime Boundary between Ghana and Côte d'Ivoire in the Atlantic Ocean (Ghana/Côte d'Ivoire), Case No. 23, Mar. 23, 2015, at 6–19 [hereinafter *Written Statement of Ghana*], https://www.itlos.org/fileadmin/itlos/documents/cases/case_no.23_prov_meas/Vol._I_-_Written_Statement_of_Ghana_FINAL.pdf [<https://perma.cc/N2DQ-ZTRS>] (archived Nov. 7, 2018).

According to Ghana, the observed silence by Côte d'Ivoire had by then come to amount to its acquiescence. This was due to Côte d'Ivoire's nonreaction in relation to Ghana's activities, which had been ongoing for a significant period, providing Côte d'Ivoire with many opportunities to protest.⁵⁷ The silence or inaction of a state in a situation where the converse (i.e., taking some action) was called upon may amount to acquiescence, in that rights are established under international law to the detriment of the silent state.⁵⁸ By this same token, and in defining what was at the heart of the dispute, Ghana made it clear that it was not involved in a dispute about delimitation,⁵⁹ rather, the issue was the confirmation of a pre-existing boundary that was developed through acquiescence.

After learning Ghana had engaged in a wide range of unilateral activity in the disputed area, Côte d'Ivoire approached petroleum companies that had received concessions to conduct work in nine oil and gas blocks from Ghana.⁶⁰ Côte d'Ivoire, in a letter,⁶¹ ordered these companies to abandon operations and refrain from acting on further commitments there as well.⁶² Discoveries of large quantities of mineral resources were argued by Ghana to have created this newfound interest on the part of Côte d'Ivoire in the area concerned.⁶³ Côte d'Ivoire denied that its protest was linked to Ghana's discovery of mineral resources, producing a different version of events: Ghana knew that the area had become a subject of dispute between them, certainly as early as 1992.⁶⁴ Although fully aware that the area concerned did not exclusively and uncontestedly belong to Ghana,⁶⁵ Ghana did not alter its behavior accordingly by adopting restraint in relation to the disputed area, which would have been the appropriate response from the view of international law according to Côte d'Ivoire.⁶⁶

A. Establishing a Single Maritime Boundary

In the maritime boundary dispute between Ghana and Côte d'Ivoire, the Special Chamber was requested to establish a single maritime boundary for the seabed and superjacent waters, covering conjointly the territorial sea, EEZ, and (extended) continental shelf.⁶⁷

67. *See, e.g., id.* ¶ 87.

Because the coasts of Ghana and Côte d'Ivoire are adjacent to each other,⁶⁸ their entitlements to all maritime zones, which are measured from the designated baselines, overlap from the point where the land boundary terminates. The LOSC is silent on what the applicable legal rules are concerning a single maritime boundary—for instance, whether Articles 74 and 83 of the LOSC have any application in its determination has not been explicated in the international case law. International courts and tribunals have simply assumed that these Articles are applicable whenever they were called upon to determine a single maritime boundary.⁶⁹ The Special Chamber in *Ghana/Côte d'Ivoire* considered that the maritime boundary for the territorial sea, EEZ, and the (extended) continental shelf could be delimited by using the same methodology.⁷⁰

B. Paragraph 3 of Article 83 of the LOSC

Delimitation of the maritime boundary between the coasts of Ghana and Côte d'Ivoire was one aspect of their dispute on which the Special Chamber was asked to rule. In addition, the Chamber was faced with an ancillary issue: were the unilateral activities undertaken concerning mineral resources in the disputed maritime area lawful from the view of international law?⁷¹

Côte d'Ivoire took the following position, inspired in part by the obligation to not hamper or jeopardize contained in paragraph 3 of Article 83 of the LOSC: pending continental shelf delimitation, a moratorium was imposed on unilateral acts concerning mineral resources.⁷² Upon learning of the objections of Côte d'Ivoire, Ghana, rather than abandon its unilateral conduct, intensified its level of activity in the disputed area; this was construed by Côte d'Ivoire as posing a breach of paragraph 3 as well.⁷³

Paragraph 3 will usually become relevant if states whose coasts lie *opposite* or *adjacent* to each other have been unsuccessful in

68. *Id.* ¶ 64.

69. *See, e.g.*, Case Concerning the Land and Maritime Boundary between Cameroon and Nigeria (Cameroon v. Nigeria), Judgment, 2002 I.C.J. Rep. 303, ¶¶ 285–86 (Oct. 10); Case Concerning Maritime Dispute (Peru v. Chile), Judgment, 2014 I.C.J. Rep. 3, ¶ 179 (Jan. 27); Dispute Concerning Delimitation of the Maritime Boundary Between Bangladesh and Myanmar in the Bay of Bengal (Bangladesh v. Myanmar), Case No. 16, Judgment of Mar. 14, 2012, 10 ITLOS Rep. 4; Arbitration Between Barbados and the Republic of Trinidad and Tobago, Relating to the Delimitation of the Exclusive Economic Zone and the Continental Shelf Between Them (Barbados v. Trinidad and Tobago), 27 R.I.A.A. 147, ¶¶ 234–35 (Apr. 11, 2016).

71. *See id.* ¶ 542 (saying Côte d'Ivoire submits that Ghana's conduct in the disputed maritime area violated international law).

72. *Id.* ¶¶ 135, 608, 622.

73. *Id.* ¶ 134.

delimiting their overlapping claims over the same continental shelf area.⁷⁴

This paragraph imposes two obligations tailored toward different aims on claimant states pending delimitation: seeking cooperative arrangements, in the form of the obligation to “make every effort to enter into provisional arrangements of a practical nature”; and observing restraint, so as “not to jeopardize or hamper the reaching of the final agreement.”⁷⁵ Hence, in terms of overall aim, paragraph 3 of Article 83 of the LOSC seeks to steer between cooperation and abstention.⁷⁶

At the Third United Nations Conference on the Law of the Sea (Third Conference), states’ positions on the design of paragraph 3 fell effectively along two lines.⁷⁷ One group of states argued for using a unilateral equidistance boundary line as an interim rule.⁷⁸ This boundary line would come to divide a disputed continental shelf area and form the outer point up to which a claimant could exercise jurisdiction pending delimitation.⁷⁹ Heavily opposed to this approach was another group of states, which encouraged the conclusion of provisional arrangements between claimants as an applicable interim rule.⁸⁰ The gist of their proposals was that a failure to come to a cooperative arrangement would activate the interim solution of a moratorium on economic conduct in a disputed area.⁸¹

74. By combining this with that the LOSC operates on the assumption of there being no underpinning sovereignty disputes, meaning that clarity exists in the geographical extent of the coastal state’s rights, it may be that disputed maritime areas where interweaving sovereign issues exist are beyond the reach of paragraph 3 of article 83 of the LOSC. See Van Logchem *Exploration*, *supra* note 28, at 42.

75. See, e.g., Robert Beckman, *Legal Framework for Joint Development in the South China Sea*, in UN CONVENTION ON THE LAW OF THE SEA AND THE SOUTH CHINA SEA 254 (S. Wu, M. Valencia et al. eds., 2014).

After the two doctrinally split groups reached agreement on a text,⁸² and after paragraph 3 of Article 83 was included in the Convention, critical voices soon started to emerge, questioning the merits of this provision.⁸³ Opinions as to the usefulness of paragraph 3 of Article 83 of the LOSC can be seen to have undergone some changes from the moment of its introduction into its framework. Primarily, the ruling in *Guyana v. Suriname* has brought about a change in thinking as to the importance of paragraph 3, although it has not been immune from criticism either. Since then, opinion has shifted largely towards the paragraph not being empty but, to the contrary, carrying actual weight.⁸⁴

Despite this trend, the exact significance of this obligation remains the subject of debate, varying from being of mere minor importance to fulfilling a significant role in limiting acts of unilateralism.⁸⁵ The decision of the Special Chamber in *Ghana/Côte d'Ivoire* gives cause for revisiting this statement as to the usefulness of paragraph 3 of Article 83 of the LOSC, swinging the pendulum in favor of the view that paragraph 3 is mere rhetoric. By throwing a completely different light on the importance of paragraph 3, the Chamber arguably interpreted the obligation to not hamper or jeopardize in a way to render it almost meaningless.

C. Interpreting the Obligation to Seek Provisional Arrangements

In the case between Ghana and Côte d'Ivoire, the latter did not allege in its formal submissions that Ghana had committed a breach of the obligation to seek provisional arrangements.⁸⁶ As a result, the obligation to seek provisional arrangements played a more marginal role in this case, with the Special Chamber laying out in more broad strokes what this obligation requires of the states concerned.⁸⁷ However, in its pleadings, Côte d'Ivoire did suggest that breaches of the obligation to seek provisional arrangements had occurred.⁸⁸ This seems to be the reason that the tribunal addressed the meaning of this

obligation, albeit to a more minimal extent, as compared with the obligation to not hamper or jeopardize.⁸⁹

In general terms, under the first obligation encountered in paragraph 3 of Article 83 of the LOSC, claimant states are required, in a spirit of understanding and cooperation, to make every effort to enter into provisional arrangements of a practical nature.⁹⁰ An implication of this is that, when negotiations on provisional arrangements have begun, the states concerned must approach these with a spirit of understanding and cooperation. This implies that states have to be considerate of each other's rights and positions in relation to a disputed maritime area, and must show a cooperative attitude.⁹¹ In *Guyana v. Suriname*, the tribunal emphasized the importance of developing a disputed maritime area pursuant to agreed provisional arrangements.⁹² This is a continuation of a line of argument that international courts and tribunals have been advocating for a while now: the favored response to deal with difficulties that can emerge from having overlapping claims is for the states involved to seek and agree on cooperative arrangements.⁹³ The thrust of this approach is that, whenever feasible, provisional arrangements covering the disputed maritime area in the period that precedes delimitation should be created. This would enable the states concerned to mutually pluck economic fruits from developing a disputed area; otherwise, such development probably has to be deferred to until after delimitation.

Despite the measure of importance ascribed to cooperative arrangements, there is a caveat. The tribunal in its award in *Guyana v. Suriname* framed the extent of the positive obligation under paragraph 3 of Article 83 of the LOSC in the following way: states are under a duty to make good faith attempts to come to a provisional arrangement, constituting an obligation of conduct.⁹⁴ A breach of this obligation is avoided when earnest efforts are made by the states concerned at arriving at this result.

D. *Interpreting the Obligation to Not Hamper or Jeopardize*

In contrast, playing a prominent part in this case was the negative obligation in paragraph 3 of Article 83 of the LOSC: the obligation to not hamper or jeopardize reaching a delimitation agreement. Côte d'Ivoire relied heavily on this obligation, and alleged that Ghana

89. See, e.g., *Ghana/Côte d'Ivoire* (Judgment), 17 ITLOS Rep. ¶ 607.

90. See Van Logchem *Status*, *supra* note 1, at 225–27.

94. *Guyana v. Suriname*, 30 R.I.A.A. ¶ 461.

committed several breaches thereof.⁹⁵ Clearly, the idea of abstention or restraint underpins the obligation to not hamper or jeopardize delimitation.⁹⁶ More specifically, it embodies the general thought of discouraging certain unilateral acts from being undertaken in relation to a disputed continental shelf area.⁹⁷

There are two sides to the obligation not to hamper or jeopardize, in that it relates to both actions and reactions of claimant states undertaken concerning a disputed continental shelf area.⁹⁸ The following rationale underlies this obligation: were claimant states to continue to act unilaterally in relation to their disputed continental shelf area, or if they were to react in a particular way to unilateral conduct, the difficulties in reaching the final delimitation would be enhanced as a result (be it through their own efforts in the shape of a delimitation agreement or submission of the maritime boundary dispute to an international court or tribunal).⁹⁹ The converse side to the obligation to not hamper or jeopardize, in that a *reaction* to a unilateral act can have a detrimental effect on the chances of reaching the final delimitation, is illustrated in Suriname's reaction to Guyana allowing an oil rig to move into a disputed maritime area, in order to initiate exploratory drilling.¹⁰⁰

Although there is clarity in terms of spirit (i.e., to exercise restraint), the precise sphere of operation of the obligation is far less straightforwardly established, with the paragraph itself failing to single out specific acts surpassing the threshold of non-hampering or jeopardizing, therewith leaving the material reach of this obligation unspecified. The two words "hamper" and "jeopardize" are central to developing an understanding of the meaning of this obligation and assisting in ascertaining the types of unilateral conduct that are captured under its reach. These terms cannot be treated as synonyms, however. The insertion of these two terms injects a distinction into paragraph 3 of Article 83 of the LOSC: acts having an effect of either hampering or jeopardizing must be abjured prior to delimitation of the disputed continental shelf area. Illustrating that the words convey

different meanings is the use of the disjunctive, “or,” which separates the two words of “hampering” and “jeopardizing.”¹⁰¹

Because of the inclusion of the words “every effort” in the obligation to not hamper or jeopardize contained in paragraph 3 of Article 83 of the LOSC,¹⁰² the obligation is transformed into an obligation of conduct.¹⁰³ The ordinary meaning of the phrase “every effort” would suggest this indeed is the case. The effect this good faith component has on the content of the negative obligation in paragraph 3 of Article 83 of the LOSC is to require that the states concerned must have made genuine efforts to avoid engaging in acts with a subsequent effect of hampering or jeopardizing the final delimitation. An alternative reading of the language of paragraph 3 of Article 83 of the LOSC is that the requirement of “every effort” solely operates in connection with the obligation to seek provisional arrangements; this would arguably better comport with the meaning of not hampering or jeopardizing delimitation, which is akin to a prohibition.¹⁰⁴ However, this interpretation is problematic: if the words “shall make every effort” are not linked to the second limb of the sentence contained in paragraph 3, it would be incomplete and grammatically incorrect. However, the addition of the words “shall make every effort” implies that the obligation could be violated if the result expected by one state (i.e., reaching delimitation) has not been achieved, or is regarded to have been complicated by one state, due to acts of unilateralism undertaken by another claimant.

The extent of the limitation imposed by the obligation to not hamper or jeopardize is dependent on an act having a hampering or jeopardizing effect on the successful completion of the final delimitation. However, whether a unilateral act hampers or jeopardizes varies with the specific circumstances of the case.¹⁰⁵ So, there is a variable in play: a unilateral act may have an effect of hampering or jeopardizing reaching a delimitation agreement between certain states but may not have a similar effect between other states. Hence, categorizing acts caught under the obligation to not hamper or jeopardize cannot be defined *in abstracto*: the specifics of the disputed maritime area will be critical in this regard. This view is supported by Judge Paik’s separate opinion in *Ghana/Côte d’Ivoire*,¹⁰⁶ also arguing

against designing closed categories of “lawful” and “unlawful” activities in disputed continental shelf areas, as discussed in Part V.B.2.

E. *Paragraph 3 of Article 83 of the LOSC: What Can Be Learned from the Case Law Rendered Prior to Ghana/Côte d’Ivoire?*

There are two previous rulings (i.e., *Aegean Sea Continental Shelf (interim measures)* and *Guyana v. Suriname*) that have contributed to a better understanding of the content of paragraph 3 of Article 83 of the LOSC, the latter in a direct manner and the former in an indirect manner. Although the decision of the ICJ in *Aegean Sea Continental Shelf (interim measures)* was rendered before the LOSC entered into force, and despite being an interim measures procedure, it remains important in interpreting paragraph 3 of Article 83 of the LOSC. The continued relevance of *Aegean Sea Continental Shelf (interim measures)* is due to the fact that the final ruling the tribunal delivered in *Guyana v. Suriname* replicates largely, although with some minor variations, the reasoning of the ICJ from this earlier decision.¹⁰⁷ In *Aegean Sea Continental Shelf (interim measures)*, the ICJ in its decision elevated the standard of unilateral acts having an effect of causing irreparability to a state’s rights as the relevant rule of thumb to distinguish between lawful and unlawful uses of a disputed continental shelf area.¹⁰⁸

However, whatever their merits may be, there are various reasons for these two decisions not pinning down the scope for unilateralism in relation to mineral resources in a definitive way. Importantly, *Aegean Sea Continental Shelf (interim measures)* was an interim measures procedure that operated according to its own rules, *limiting* its usefulness in interpreting paragraph 3 of Article 83 of the LOSC.¹⁰⁹ Because a lower threshold than irreparability is perceived under hampering or jeopardizing, more acts than merely those surpassing the standard of irreparability would be captured thereunder. But, more importantly, and this builds on the argument presented above, that each disputed maritime area has its own intricacies and surrounding dynamics renders a discussion of what scope remains for unilateralism in such areas in conclusive terms inapposite.¹¹⁰

https://www.itlos.org/fileadmin/itlos/documents/cases/case_no.23_merits/C23_Judgment_23.09.2017_SepOp_Paik_orig.pdf [https://perma.cc/7Y3K-7GDA] (archived Nov. 7, 2018).

107. Anderson & Van Logchem, *supra* note 8, at 218; Van Logchem *Status*, *supra* note 1, at 237.

108. The ICJ’s position seems to bear a close connection with the general rule of international law of causing no harm to rights of another State. See BIICL REPORT, *supra* note 5, at 20.

109. See Van Logchem *Unilateralism*, *supra* note 3, at 186–91.

110. Anderson & Van Logchem, *supra* note 8, at 206; Van Logchem *Unilateralism*, *supra* note 3, at 186.

1. *Aegean Sea Continental Shelf (interim measures)*

As regards those parts of the disputed continental shelf area of the Aegean Sea where Turkey sought to map out the potential for mineral resources through seismic work and scientific research,¹¹¹ Greece claimed to have exclusive entitlements, which encompassed a sole right to collect information about the composition of the seabed.¹¹² Greece argued that through unilateral seismic work, its sovereign rights were breached and their exclusive character infringed upon.¹¹³ Such infringement was sufficient, according to Greece, for the ICJ to indicate measures of interim protection.¹¹⁴ However, beyond the infringement upon the aspect of exclusivity, seismic work also caused irreparability to Greece's sovereign rights.¹¹⁵

In dealing with this argument, the ICJ acknowledged a risk of prejudice accompanying unilateral seismic work.¹¹⁶ However, it concluded in a general sense that unilateral conduct of a mere transitional character, which encompassed seismic work, did not have a risk of prejudicing the rights of another claimant state irremediably.¹¹⁷ So, there seems to have been a lack of the required urgency, not enabling the Court to indicate measures of interim protection. Particularly important in this regard is that the resultant prejudice was found to be of a nature that could be repaired *ex post facto* (i.e., after the ICJ would have handed down its ruling on the merits as to where the continental shelf boundary lies). Hence, the materialization of the prejudice connected to unilateral seismic work was made dependent on the assumption that the area in question would ultimately be on Greece's side of the established boundary.

However, the ICJ did not generalize this position, in that every unilateral act carrying the risk of prejudice when undertaken in a disputed maritime area was acceptable. Central to this determination was the following question: can the harm caused through unilateral conduct be financially compensated after delimiting the continental shelf boundary? One type of act threatening the rights of another state with irreparability was placing an installation in contact with the disputed continental shelf area.¹¹⁸ Therefore, according to the ICJ in *Aegean Sea Continental Shelf (interim measures)*, it could not

commence *pendente litis*.¹¹⁹ Furthermore, exploratory drilling and the actual appropriation of mineral resources, or making attempts thereto, would likewise lead to irreparability. These acts thus fell in the category of unilateral acts concerning a disputed continental shelf area that would have merited the indication of interim measures of protection.¹²⁰ In the overall analysis of the ICJ, there being a physical component attached to a unilateral act was critical, in that the continental shelf would have been somehow modified.¹²¹ A similar emphasis can be seen in the dispute between Guyana and Suriname,¹²² on which there is more in the next subpart.

2. *Guyana v. Suriname*

Now, this Article turns to the maritime boundary dispute between Guyana and Suriname. The main emphasis in this subpart will be on retracing the steps of the tribunal, which led it to ultimately attribute a central role to the ICJ's decision in *Aegean Sea Continental Shelf (interim measures)* in its own interpretation of the content of paragraph 3 of Article 83 of the LOSC. Both parties to the dispute relied on paragraph 3, claiming that it had been breached by the other state.¹²³ The primary event instigating the formulation of arguments by either of the parties to this dispute based on paragraph 3 was a petroleum company, licensed only by Guyana, moving a drilling rig into a disputed area to begin exploratory drilling.¹²⁴ Guyana argued that the positioned oil rig was allowed to unilaterally drill in the disputed area: no discernible differences exist between drilling and seismic work, both being lawful exploratory activities.¹²⁵ Suriname based its argument on the opposite view, at the core of which was the dissimilar nature of the two acts.¹²⁶ An appraisal of the lawfulness of drilling and seismic work had to be informed by different considerations, in the view of Suriname.¹²⁷ Suriname construed Guyana, who had authorized exploratory drilling, to have altered the *status quo* that existed in the disputed area: that is, to a degree that the chances of effecting a delimitation were impeded upon.¹²⁸

The tribunal interpreted the two obligations included in paragraph 3 of Article 83 of the LOSC¹²⁹ in a way that the imposition of a moratorium on economic activities pending delimitation needed to be avoided.¹³⁰ In distinguishing between permissible and impermissible unilateral conduct concerning disputed continental shelf areas, the tribunal assessed whether “the risk of physical damage to the seabed or subsoil” accompanied a unilateral act.¹³¹ Based on this criterion, unilateral exploratory drilling and the actual taking or the making of attempts to take such resources were considered unlawful. To the contrary, however, activities of an exploratory nature, encompassing both prospecting and licensing for mineral resources, could generally be undertaken in relation to disputed continental shelf areas.¹³² An important component informing the analysis of the tribunal on this point was that the ICJ designated seismic work to be of a transitory character in *Aegean Sea Continental Shelf (interim measures)*.¹³³ However, exploratory drilling and exploitation needed to be treated as legally different from unilateral seismic testing according to the tribunal,¹³⁴ with the former two acts resulting in a “perceived change to the status quo.”¹³⁵

Despite being the most elaborate pronouncement on the meaning of paragraph 3 of Article 83 of the LOSC, considerations produced in *Guyana v. Suriname*, notwithstanding some assumptions to the contrary,¹³⁶ have proven not to be the definitive word on the matter of what scope is reserved for unilateralism in relation to mineral resources within disputed areas. The relevance of the specific circumstances surrounding a disputed maritime area in setting the scope for unilateralism is confirmed by the judgment of the Special Chamber in *Ghana/Côte d’Ivoire*, coming to very different conclusions compared to the tribunal in its award in *Guyana v. Suriname*.¹³⁷

IV. THE FIRST PART OF THE PROCEEDINGS BETWEEN GHANA AND CÔTE D'IVOIRE: INTERIM MEASURES STAGE

Earlier in this Article, the positions of Ghana and Côte d'Ivoire, and the handling of the arguments by the Special Chamber in the phases on the merits and interim protection, have been laid out in broad strokes. In turn, both these phases will be analyzed with a special emphasis on those aspects bearing on the issue of acts of unilateralism undertaken in disputed maritime areas concerning mineral resources. Part IV will start with looking at the phase of the interim measures, which was initiated by Côte d'Ivoire in February 2015 with its request for interim protection, then directing attention in Part V to the dispute on the merits, on which the Special Chamber delivered its final judgment in September 2017.

A. Côte d'Ivoire's Position on Interim Measures

Côte d'Ivoire's stated reason for the request for interim protection was that the exclusivity existing for the coastal state to act concerning the continental shelf was infringed upon, predominantly basing its position on Articles 2(2), 56(1), and 77(1) of the LOSC.¹³⁸ The exclusivity enjoyed by Côte d'Ivoire enabled it to engage in acts related to mineral resources that may have been found in the continental shelf, to the exclusion of all other states. Under this logic, unilateral acts having an economic character had to be fully abjured prior a final delimitation. As a corollary thereto, Côte d'Ivoire's request was tailored to halt activities already set in motion in the disputed area.¹³⁹ In addition, it sought measures of interim protection to the effect of prohibiting future conduct—that is, that no new permits were awarded or activated by Ghana in relation to the disputed maritime area prior to final delimitation.¹⁴⁰ If Ghana was allowed to continue with unilateral conduct related to mineral resources, Côte d'Ivoire's sovereign rights would become threatened with irreparability. Moreover, significant and irreparable harm to the marine environment was inevitable to ensue.¹⁴¹

Effects of this magnitude were argued to occur from the following range of unilateral activities: conducting (marine scientific) research; the concluding of contracts with the petroleum industry; the approval

138. See *Dispute Concerning Delimitation of the Maritime Boundary between Ghana and Côte d'Ivoire in the Atlantic Ocean (Ghana/Côte D'Ivoire)*, Case No. 23, Provisional Measures, Order of Apr. 25, 2015, 15 ITLOS Rep. 146, ¶ 49.

139. See *id.* ¶¶ 50–56.

140. These were two of Côte d'Ivoire's five submissions, that is (i) and (ii). See *id.* ¶ 25.

141. Request for the Prescription of Provisional Measures Submitted by the Republic of Côte d'Ivoire, *Dispute Concerning Delimitation of the Maritime Boundary between Ghana and Côte d'Ivoire in the Atlantic Ocean (Ghana/Côte d'Ivoire)*, Case No. 23, Feb. 27, 2015, at 15–16.

of seismic work; starting (exploratory or exploitation) drilling operations; and bringing installations into position within a disputed area.¹⁴² Along these lines, Côte d'Ivoire, in its oral pleadings, sought to demonstrate that the effects of drilling into the seabed for mineral resources were such that the seabed could, by definition, not be returned to its original state,¹⁴³ rather, effects caused to the marine environment would be permanent. According to Côte d'Ivoire, international law recognized that the following elements are encompassed by a coastal state's sovereign rights: having information in relation to mineral resources in terms of their amount, places where they are located, and whether the *in situ* available quantities would be suitable for commercial exploitation.¹⁴⁴ If, in the final ruling the area in question would be established to be on Côte d'Ivoire's side of the boundary, Ghana's possession of this information would cause irreparable prejudice to Côte d'Ivoire's rights.

Paragraph 3 of Article 83 of the LOSC was invoked by Côte d'Ivoire to further reinforce its position that its exclusiveness of rights over the continental shelf needed to be preserved prior to delimitation. Côte d'Ivoire took the position that the implication of paragraph 3 was that a moratorium on economic conduct was automatically introduced.¹⁴⁵ Lifting this moratorium was tied to states having reached cooperative arrangements or a delimitation. Support for this position was provided, according to Côte d'Ivoire, by the debates at the Third Law of the Sea Conference.¹⁴⁶ Here during negotiations, a number of states actively promoted the moratorium solution as the applicable rule prior to delimitation, and in the absence of agreement to the contrary between the states concerned.¹⁴⁷ This interpretation is problematic, however: an interim rule based on a moratorium was a minority opinion at the Third Law of the Sea Conference, being held only by a smaller group of states (e.g., Ireland and Papua New Guinea).¹⁴⁸ The gist of these proposals was virtually identical to the argument of Côte d'Ivoire: if claimant states were unsuccessful in

147. *See* Van Logchem *Unilateralism*, *supra* note 3, at 180 (discussing Ireland's introduction of the concept of a moratorium as the applicable interim rule seeking to govern the conduct of States pending continental shelf delimitation, but saying it was not discussed much).

148. *See, e.g.*, Platzöder, *supra* note 81, at 406.

setting up cooperative arrangements, a moratorium on economic conduct would be introduced. Aside from being limited in number, proposals advocating a ban on all economic activities were met with a great measure of skepticism from other states because of their economic consequences.¹⁴⁹

It is of note that Côte d'Ivoire's reasoning on the point of a moratorium being introduced as an interim rule seems to have not been entirely consistent. In its oral pleadings, Côte d'Ivoire argued that paragraph 3 of Article 83 of the LOSC does not imply that no room exists for economic conduct within a disputed maritime area; however, this position was turned on its head in the merits phase.¹⁵⁰ Overall, the *de facto* effect of the position of Côte d'Ivoire was seeking to return the disputed maritime area to a state where Ghana had not acted unilaterally and unlawfully in relation to mineral resources, which it deemed to be the relevant *status quo*.¹⁵¹

B. Ghana's Position on Interim Measures

Much of Ghana's argumentation, designed around justifying it moving to the phase of exploitation, was tied to Côte d'Ivoire acquiescing to the conduct of Ghana by never protesting. In its pleadings, Ghana invoked a range of examples in support of its contention of acquiescence: the alignment of concessions given by the two states concerned, and that drilling and seismic operations had only commenced on their respective sides of the equidistance boundary line.¹⁵² The evidence invoked by Ghana to strengthen its argument consisted, *inter alia*, of it allowing the petroleum industry to proceed with work by using the equidistance boundary line as the appropriate rule of thumb for acceding or denying requests from the industry. Further, and this functioned as the linchpin of Ghana's argument, all this happened without the protest of Côte d'Ivoire.¹⁵³ Ghana continued by trying to demonstrate, through significant detail, that its own practice of respecting the equidistance boundary was mirrored by the licensing practice of Côte d'Ivoire: the latter was restrained similarly

149. See, e.g., *id.* at 430.

because the reach of its concluded contracts with the petroleum industry never crossed this equidistance line.¹⁵⁴

A second strand of argument presented by Ghana was that the request for the indication of measures of interim protection could not succeed because Côte d'Ivoire did not intend to keep its disputed maritime area in pristine condition.¹⁵⁵ The discovery of oil and gas fields in "the territory of Côte d'Ivoire" would result in the roles of the two states being reversed, in that Ghana would have found itself on the outside looking in.¹⁵⁶ Côte d'Ivoire, with a similar zest, would have undertaken acts in connection with the mineral resources in the disputed area. According to Ghana, Côte d'Ivoire's attempt to draw a parallel with previous case law (i.e., *Aegean Sea Continental Shelf (interim measures)* or *Guyana v. Suriname*) to bolster its argument that Ghana's unilateral acts were unlawful, was misplaced.¹⁵⁷ This was because the facts existing between Ghana and Côte d'Ivoire stood in stark contrast to these two previously mentioned cases, where there had been no "exploration or development" by either state.¹⁵⁸ A fundamental difference was that Suriname contested the lawfulness of all exploratory drilling within the disputed area, and Greece argued that no seismic work could be undertaken in relation to the disputed continental shelf area.¹⁵⁹ Rather, according to Ghana, what was at the core of its dispute with Côte d'Ivoire, and inspiring the tone of the latter's argumentation, was Côte d'Ivoire feeling entitled to enjoy the economic benefits that could be reaped from developing the mineral resources located in the disputed continental shelf area.¹⁶⁰

Another ground invoked by Ghana against having to put all its exploration and exploitation efforts on hold for the duration of the dispute over the maritime boundary being settled was the economic implications that would have followed therefrom. Ghana considered these implications to be close to catastrophic, as investments that were made at the time already exceeded USD\$4.5 billion.¹⁶¹ To order Ghana to put a stop to the work would lead to investors withdrawing from their earlier commitments, dealing "a crippling blow"¹⁶² to Ghana's

economy—in fact, it would regress to a low point it had not been at for several decades.¹⁶³ Investors withdrawing were not the only negative consequence that followed from putting a stop to Ghana's activities: infrastructure already being moved into the disputed area to start with the production of mineral resources, after falling into disuse, would also begin to deteriorate.¹⁶⁴ Ghana, in tailoring its argument to whether the requirement of urgency was fulfilled, being one of the necessary requirements for an international court or tribunal to offer interim protection, argued that the fact that it was able to progress to the stage of exploitation exemplified the lack of urgency thereof.¹⁶⁵ Besides a lack of urgency, the requirement of irreparability was also not met. Damages claimed to be incurred by Côte d'Ivoire lacked the element of irreparability, as they could be remedied through awarding damages *ex post facto*.¹⁶⁶ Under its argument, Ghana did not distinguish between the different types of acts it undertook concerning mineral resources in terms of their reparability.¹⁶⁷ No matter whether these acts were exploration or exploitation related, all of them could be compensated after delimitation with seemingly equal ease.

C. *The Order of the Special Chamber of ITLOS*

On April 25, 2015, the Special Chamber delivered its ruling on the question of whether interim measures of protection could be indicated, per the request of Côte d'Ivoire.¹⁶⁸ Despite Côte d'Ivoire's reliance on paragraph 3 of Article 83 of the LOSC in its request for interim protection, and that Ghana referred to this paragraph as well, no mention of this provision can be found in the order of the Special Chamber.¹⁶⁹

According to the Chamber, two elementary requirements needed to be present in order for it to be able to accede to a request for interim protection: (1) a recognized urgency and (2) a real and imminent threat of irreparable prejudice to rights.¹⁷⁰ Here, the Chamber seems to have followed the line of argument that had been, *inter alia*, set out earlier by the ICJ in its ruling in *Pulp Mills on the River Uruguay (Argentina*

163. *Id.* at 25, 27–29.

164. *Id.* at 26–27.

169. It has been suggested that the reason for this is that the members of the Special Chamber operated on the belief that paragraph 3 of Articles 74 and 83 of the LOSC carries no relevance in an interim measures procedure. See BIILC REPORT, *supra* note 5, at 26.

170. Dispute Concerning Delimitation of the Maritime Boundary between Ghana and Côte d'Ivoire in the Atlantic Ocean (Ghana/Côte d'Ivoire), Case No. 23, Provisional Measures, Order of Apr. 25, 2015, 15 ITLOS Rep. 146, ¶ 42.

v. Uruguay) (*Provisional Measures*) (*Pulp Mills* case), indicating that the ordering of interim measures of protection is inexorably interwoven with the presence of an urgent necessity to prevent irreparable prejudice to the rights in dispute before the Court is able to give its final ruling on the matter.¹⁷¹ On the question of whether, in the case at hand, the thresholds of irreparability and urgency were surpassed, the Special Chamber gave a mixed answer. Gathering information and undertaking unilateral exploration and exploitation activities in connection with the disputed area were recognized by the Chamber to pose a threat of irreparability.¹⁷² to paraphrase, this unilateral conduct caused a “risk of irreversible prejudice” to Côte d’Ivoire’s rights.¹⁷³

What is especially interesting about this part of the order is that the Chamber established a relationship that was hitherto not explicitly recognized to exist in the international case law: gathering information on a disputed continental shelf area, and putting it to use—being an act that does not alter the geography of the continental shelf—may possibly lead to irreparability being caused to another state’s rights. Among the rights a coastal state has over the continental shelf, and which might be irreparably infringed upon, is plausibly to obtain information and to put it to use exclusively and in a way of its own design¹⁷⁴ (i.e., a right to information was acknowledged to exist by the Chamber).

Notwithstanding the Special Chamber’s finding that a “risk” of irreparability was caused by the unilateral acts of Ghana, this did not automatically imply that the required urgency was present, constituting a second hurdle that had to be overcome for an international court or tribunal to be able to institute interim measures of protection. Subsequently, the Chamber addressed when this consideration would enter into play: manifestation of this risk was tied to a showing that the area in which the unilateral seismic work took place was considered to be under the jurisdiction of Côte d’Ivoire.¹⁷⁵

Hence, the Chamber identified two respective stages (i.e., before and after delimitation) showing significant similarity to the way in which the ICJ construed its analysis in *Aegean Sea Continental Shelf* (*interim measures*). Exploration activities that were undertaken by Turkey in connection with a disputed continental shelf area carried, in the view of the ICJ, the inherent possibility of causing prejudice.¹⁷⁶ However, this risk coming to fruition was entwined with the

174. *Id.* ¶ 94.

175. *Id.* ¶ 95.

176. *Aegean Sea Continental Shelf Case* (Greece v. Turk.), Request for the Indication of Interim Measures of Protection, Order, 1976 I.C.J. Rep. 3, ¶¶ 30–31 (Sept. 11).

consideration of the area ultimately being considered to be under the exclusive jurisdiction of Greece after the delimitation was established by the ICJ. In terms of this risk arising, the Special Chamber in *Ghana/Côte d'Ivoire* reached a rather similar conclusion.

However, at variance with the ICJ in *Aegean Sea Continental Shelf (interim measures)*, the Chamber stated that damages incurred from producing mineral resources could be compensated by financial means *ex post facto*. In this regard, the Chamber considered only the relative ease with which unilateral exploitation could be compensated, implying that in relation to exploration activities (e.g., exploratory drilling and seismic work) this exercise of calculating the extent of damages will be more complicated.¹⁷⁷ At face value, it does indeed seem more difficult to calculate the damage caused through unlawful drilling and seismic work. For example, how can the obtaining of an advantage by one claimant over another in terms of the information it possess through conducting seismic work or exploratory drilling be compensated? The Special Chamber did not further elaborate on how these relevant differences in connection with certain types of unilateral mineral resource activity interacted with calculating the height of compensation.

However, away from the question of compensation, the Chamber recognized another side to Ghana's exploration and exploitation activities undertaken in the disputed area: that is, the continental shelf was invariably modified as a result. Some of these physical modifications to the continental shelf cannot be remedied through financial compensation *ex post facto* according to the Special Chamber.¹⁷⁸ What was clear, however, is that compensation does not enable restoring the physical characteristics of the continental shelf to its original form (i.e., to the state prior to the unilateral act being undertaken).¹⁷⁹

It was not decisive for the Chamber that a particular unilateral act carried the potential for causing damage of an irremediable nature, as indicated earlier. Rather, the unlawfulness of a unilateral act was tied to the areas concerned being considered to be under the exclusive jurisdiction of Côte d'Ivoire after delimitation. After emphasizing that it could give individual measures of interim protection different, in whole or in part, from those requested by the parties to a dispute, the Chamber addressed the ramifications of ordering Ghana to put a halt to its previously initiated conduct in relation to mineral resources in the disputed area.¹⁸⁰ According to the Chamber, ordering Ghana to abort work had two consequences that predominantly argued against this, one of which was underlain by perceived financial ramifications; and the other concerned the marine environment being detrimentally

177. *Ghana/Côte d'Ivoire (Provisional Measures)*, 15 ITLOS Rep. ¶ 88.

178. *Id.* ¶ 89.

180. *Id.* ¶¶ 97–100.

affected.¹⁸¹ More specifically, what formed a serious threat to the marine environment was putting the infrastructure out of commission, which would invariably set in motion the deterioration process.

However, the Special Chamber did not elaborate on why in the balance of things this particular environmental concern trumped the other environmental impacts caused by Ghana's exploration and exploitation activities in the disputed area. Furthermore, the financial losses suffered by Ghana, and those being concessioned by it, would impose an "undue burden" on the state.¹⁸² In balancing the aforementioned two considerations with the aspect of preserving the rights claimed by Côte d'Ivoire, particularly their exclusive character, the Chamber drew the line at drilling new wells, allowing previous drilling operations to continue unaffected.¹⁸³ Ghana, in addition, had to make sure that information previously gathered, or that would be collected on future occasions from drilling, would not be used in a way that could come "to the detriment of Côte d'Ivoire" if the areas were conclusively considered to be under its jurisdiction after delimitation.¹⁸⁴

V. THE SECOND PART OF THE PROCEEDINGS BETWEEN GHANA AND CÔTE D'IVOIRE: MERITS STAGE

During the merits phase, Ghana repeated many of its previously presented arguments focusing on the silence observed by Côte d'Ivoire for over four decades, resulting in acquiescence.¹⁸⁵ Côte d'Ivoire disputed that there was acquiescence on its part, as evinced by its various protests.¹⁸⁶ Two main reasons were invoked by Côte d'Ivoire to argue that the unilateral acts of Ghana were unlawful: the exclusivity of the sovereign rights Côte d'Ivoire claimed to have was infringed upon; and Ghana's unilateral conduct exerted a separate effect of hampering and jeopardizing delimitation.

A. Côte d'Ivoire's Contentions

According to Côte d'Ivoire, it became clear in the twentieth century that there was a maritime boundary dispute between itself and Ghana. Particularly relevant in this regard were two events occurring

181. *Id.* ¶ 99.

182. *Id.* ¶ 100.

183. *Id.* ¶ 102.

184. *Id.* ¶108(1)(b).

185. *See, e.g.*, Reply of Ghana, Volume I, Dispute Concerning Delimitation of the Maritime Boundary between Ghana and Côte d'Ivoire in the Atlantic Ocean (Ghana/Côte d'Ivoire), Case No. 23, July 25, 2016, at 4, 137–38.

186. Counter-Memorial, Dispute Concerning Delimitation of the Maritime Boundary between Ghana and Côte d'Ivoire in the Atlantic Ocean (Ghana/Côte d'Ivoire), Case No. 23, Apr. 4, 2016, at 117–20.

in 1988 and 1992, during which Côte d'Ivoire sought to force Ghana to postpone its unilateral activities by protesting.¹⁸⁷ This made it abundantly clear, according to Côte d'Ivoire, that it never recognized the outer point of Ghana's earlier given concessions (i.e., not crossing the equidistance line) as the location where the maritime boundary lay.¹⁸⁸

After reviewing the relevant case law, Côte d'Ivoire concluded that the standard as to when tacit agreement can be assumed to exist was set very high by international courts and tribunals, whenever they were faced with such claims.¹⁸⁹ A mere alignment in the scope of awarded concessions would be insufficient in meeting this threshold.¹⁹⁰ Contrary to the picture sketched by Ghana, claiming that its activities had been continuously ongoing over decades, reality according to Côte d'Ivoire was different. Two aspects illustrated this. First, the majority of Ghana's drilling operations were concentrated in the period between 2009 and 2014; and, second, Ghana speeding up its unilateral activities was tied to receiving promising results as to the commercial viability of certain oil and gas fields located in the disputed area.¹⁹¹ The protests made by Côte d'Ivoire did not deter Ghana from increasing its level of activity, however.

In support of its contention that Ghana breached paragraphs 1 and 3 of Article 83 of the LOSC, Côte d'Ivoire invoked three considerations. First, the unilateral acts undertaken by Ghana in the disputed area exerted an effect of hampering or jeopardizing; second, Ghana's uncompromising stance in negotiations was contrary to both paragraphs 1 and 3 of Article 83 of the LOSC; and, third, Ghana's historical unwillingness to have the matter adjudicated by an international court or tribunal breached these two paragraphs.¹⁹²

In its counter-memorial, Côte d'Ivoire analyzed the meaning of Article 83 of the LOSC in a wider sense. It began by pointing out that Ghana's unilateral conduct resulted in a breach of an obligation flowing from paragraph 1 of Article 83 of the LOSC: through undertaking acts unilaterally, Ghana had abandoned all willingness to negotiate in good faith on settling the maritime boundary dispute.¹⁹³

187. Dispute Concerning Delimitation of the Maritime Boundary between Ghana and Côte d'Ivoire in the Atlantic Ocean (Ghana/Côte d'Ivoire), Case No. 23, Judgment of Sept. 23, 2017, 17 ITLOS Rep. 1, ¶ 174.

188. *Id.* ¶¶ 103, 105.

189. *See id.* ¶ 122 ("Côte d'Ivoire argues that an analysis of the documents produced by Ghana relating to the line for oil concessions does not demonstrate the existence of a tacit agreement on a maritime boundary in accordance with the high standard required by jurisprudence.")

190. *Id.*

191. *Id.* ¶ 134.

192. *Id.* ¶ 598–600, 606.

193. Counter-Memorial, Dispute Concerning Delimitation of the Maritime Boundary between Ghana and Côte d'Ivoire in the Atlantic Ocean (Ghana/Côte d'Ivoire), Case No. 23, Apr. 4, 2016, at 235.

In elaborating further on how paragraph 1 of Article 83 of the LOSC was breached, Côte d'Ivoire pointed to Ghana's behavior being synonymous with the latter seeking to effect a maritime boundary through creating a *fait accompli*, rather than through agreement as paragraph 1 explicitly requires.¹⁹⁴ Côte d'Ivoire argued that the importance of the obligation to hold good faith negotiations had been enhanced in light of the fact that the oil and gas fields located in the disputed area could be considered a "shared deposit."¹⁹⁵

Côte d'Ivoire built the majority of its argumentation on the point of the unlawfulness of the unilateral activities around paragraph 3, predominantly the obligation to not hamper or jeopardize delimitation of the continental shelf. The origins of the obligation to negotiate towards a provisional arrangement, and it becoming a constituent part of paragraph 3, were traced back to the division that pervaded during the Third Law of the Sea Conference over the extent to which limitations had to be imposed on the scope of unilateral economic conduct within a disputed area.¹⁹⁶ Determining where the continental shelf boundary lay between the coasts of Ghana and Côte d'Ivoire was, according to the latter, complicated by the unilateral mineral resource activity of Ghana.¹⁹⁷ One of the aspects that enhanced the difficulties encountered in this regard was the scale on which Ghana undertook unilateral acts in relation to the disputed continental shelf area. The chosen strategy of Côte d'Ivoire revolved around an attempt to show that refraining from unilateral economic conduct in a disputed maritime area is mandated pursuant to international law—"les activités économiques unilatérales sont prohibées dans une zone litigieuse."¹⁹⁸ Its argument on this point, falling effectively along two lines, will be explored in turn over the next two paragraphs.

Combining the gist of paragraph 3 of Article 83 of the LOSC, particularly its negotiating history, with the exclusivity of sovereign rights of the coastal states, the following could be concluded according to Côte d'Ivoire: unilateral economic conduct had to be completely eschewed prior to continental shelf delimitation.¹⁹⁹ In an attempt to reinforce its argument, Côte d'Ivoire relied heavily on one particular holding set out in *Guyana v. Suriname*, in which the tribunal held that activities brought under the reach of a provisional arrangement could be undertaken pending delimitation.²⁰⁰ Isolated from its context, this holding can perhaps be interpreted to mean that concluding a

provisional arrangement precludes the possibility of undertaking unilateral conduct within a disputed maritime area. However, when read in conjunction with other holdings of the tribunal, the force of this presented argument ebbs away quickly. This is because in these other holdings, the tribunal rather emphasized that some room must be reserved for unilateral conduct in connection with mineral resources.²⁰¹ Furthermore, it went on to draw a divisional line between different categories of unilateral activity, placing some economic activities in the permissible category, and placing others in the impermissible one, undercutting Côte d'Ivoire's reading of *Guyana v. Suriname* further.²⁰²

In addition, Côte d'Ivoire carefully detailed its argument that the principle of exclusivity would entail that no economic activities can commence prior to delimitation. Under international law, the coastal state (i.e., Côte d'Ivoire) enjoys exclusive use over the adjacent continental shelf and the mineral resources contained therein, as is reaffirmed in Articles 77 and 81 of the LOSC.²⁰³ Breaches were made on this exclusivity of the sovereign rights of Côte d'Ivoire, through the full range of unilateral activities concerning mineral resources undertaken by Ghana. Two detrimental effects are exerted by unilateral seismic work according to Côte d'Ivoire, making it unlawful: first, it is a "source of serious tension" between the states concerned; and, second, vital information on the resources of the seabed will be provided and be placed at the exclusive disposal of that state, offering it considerable advantages in, for example, negotiations with the petroleum industry, or in (delimitation) negotiations with the other claimant state that has not acquired the same information.²⁰⁴

The history of effected maritime boundary delimitations laid bare a recurrent pattern in the view of Côte d'Ivoire:²⁰⁵ once "invasive activities" were undertaken unilaterally within the disputed maritime area and prompted a protest from the other claimant, subsequently, acts of this nature were eschewed pending delimitation.²⁰⁶ Despite Côte d'Ivoire's protests, and it requesting Ghana to put all its unilateral conduct on hold on account of paragraph 3 of Article 83 of the LOSC, Ghana acted at variance with this detected pattern. This is seen in that instead of abandoning its practice of acting unilaterally

201. See *id.* ¶¶ 465–70 (saying unilateral acts that do not jeopardize or hamper reaching a delimitation agreement, such as those that do not cause physical change to the marine environment, are permissible).

concerning the disputed maritime area, as would have been the required response from the view of international law, Ghana decided to amplify the intensity with which it started to act unilaterally.

B. Ghana's Contentions

One of Ghana's main contentions was that there was silence on the part of Côte d'Ivoire, amounting to a *de facto* maritime boundary lying between their coasts. Evidence of this came particularly in the shape of its "oil practice," the provenance of which goes back to 1956.²⁰⁷ The range of acts undertaken by Ghana in connection with the disputed area, which consistently failed to produce any kind of response from Côte d'Ivoire, consisted of the following: entertaining applications from the petroleum industry, giving concessions, seismic surveying,²⁰⁸ and exploratory drilling.²⁰⁹

According to Ghana, acceptance of the equidistance boundary line started in 1957, with Côte d'Ivoire awarding a concession by using this same line as the outer limit; had more extensive areas been covered within its reach, an overlap would have formed with a concession given a year earlier by Ghana.²¹⁰ To avoid such an overlap was, according to Ghana, the driving force behind Côte d'Ivoire restricting the reach of its given concessions to the equidistance line.²¹¹ Since then, and despite broader areas becoming covered under awarded concessions, albeit that their precise area of application underwent some changes, a consistent pattern was argued by Ghana to have emerged: both parties to the dispute observed the equidistance boundary line in their licensing policies.²¹² Drilling by Côte d'Ivoire on its own side of the equidistance line had in fact been extensive, with no less than 212 wells being drilled; but these never extended west of the equidistance line, thus crossing into areas which Ghana regarded to be under its exclusive jurisdiction.²¹³ The accusations being directed by Côte d'Ivoire at Ghana for encroaching on the dispute area were underlain according to the latter by a fundamental misconception: Ghana had not undertaken unilateral acts in relation to mineral resources located in a "disputed area." Because of Côte d'Ivoire's acquiescence,²¹⁴ Ghana's unilateral conduct on its own side of the equidistance boundary line

214. Reply of Ghana, Volume I, Dispute Concerning Delimitation of the Maritime Boundary between Ghana and Côte d'Ivoire in the Atlantic Ocean (Ghana/Côte d'Ivoire), Case No. 23, July 25, 2016, at 137.

constituted an area under its exclusive jurisdiction. This made Côte d'Ivoire's portrayal of these activities as being "unilateral" in nature, and occurring in a disputed maritime area, a misnomer.²¹⁵

At the center of Ghana's argument was that a *de facto* boundary had evolved, but despite this main emphasis, Ghana did put forward an alternative line of argument based on paragraph 3 of Article 83 of the LOSC. The quite heavy reliance of Côte d'Ivoire on this paragraph made it seemingly necessary for Ghana to address the meaning of paragraph 3. Côte d'Ivoire's reading of paragraph 3, coming down to introducing a moratorium on economic conduct in a disputed area, had, in the view of Ghana, no basis in the case law, literature, or negotiating history; in fact, these uniformly laid out a view opposite to the one sketched by Côte d'Ivoire.²¹⁶ When paragraph 3 of Article 83 of the LOSC is analyzed in its entirety, this argument is reinforced further: not only is there an obligation mandating states to abstain from undertaking certain types of acts unilaterally, but in addition, there is an obligation imported on states to seek provisional arrangements; however, the latter does not imply an actual obligation to successfully set up cooperative arrangements.²¹⁷ Another strong presumption against the solution of the moratorium can be derived from the dispute between Guyana and Suriname. In *Guyana v. Suriname*, the tribunal placed great emphasis on avoiding the introduction of a moratorium:²¹⁸ the economic implications that follow from bringing a disputed maritime area under the reach of a moratorium argued against this. And, as was pointed out by Ghana, Côte d'Ivoire conveniently ignored that the tribunal drew a dividing line between permissible and impermissible unilateral economic uses of a disputed maritime area.²¹⁹

C. *The Special Chamber's Pronouncement on the Merits*

Ghana's primary contention was that a *de facto* maritime boundary had developed through acquiescence.²²⁰ Whether this contention was supported by the Chamber will be addressed in the next subpart. Besides delimitation, there were several other "subsidiary" aspects to the judgment of the Special Chamber that merit further consideration. Two of these aspects were: (1) had, as Ghana argued, Côte d'Ivoire's silence amounted to acquiescence; and (2) were paragraphs 1 and 3 of Article 83 of the LOSC breached by Ghana through it undertaking a wide range of unilateral acts concerning

mineral resources? Whether paragraph 3 of Article 83 of the LOSC or Côte d'Ivoire's sovereign rights were infringed upon through Ghana's acts of unilateralism, and whether international responsibility could be incurred for this, were matters of a more subsidiary nature. This was illustrated by the fact that the Special Chamber's handling of these issues formed a more minor part of the judgment.

1. Acquiescence in the Maritime Boundary?

Starting its analysis on the point of whether there was acquiescence in the maritime boundary, as alleged by Ghana,²²¹ the Special Chamber recognized that concessions awarded by the two states aligned.²²² Connected to this, operations undertaken in connection with mineral resources, being seismic surveying and drilling, similarly did not cross this boundary. After acknowledging that neither party to the dispute crossed into areas lying on the other side of the equidistance boundary, the Special Chamber, however, rejected Ghana's argument centering on the existence of a *de facto* maritime boundary.²²³ The Chamber in *Ghana/Côte d'Ivoire*, falling back on *Nicaragua v. Honduras*, in which the ICJ indicated that because of their gravity, maritime boundaries cannot be easily assumed to exist through acquiescence, held that evidence thereof must be "compelling."²²⁴

Next, the Chamber addressed why the threshold of compelling evidence was not met by Ghana. One problematic aspect with Ghana's position was that most of the evidence centered on the existence of a consistent oil practice.²²⁵ In finding that the evidence presented by Ghana relating to this oil practice did not bear out the existence of a pre-existing boundary, falling short of being compelling, there were three aspects to the Special Chamber's denial on this point. First, although the record was patchy, in that Côte d'Ivoire protested irregularly and with varying intensity, it did protest on more than one occasion against Ghana's unilateral conduct concerning mineral resources, so much was clear.²²⁶ Second, the Special Chamber entertained significant doubts whether a *de facto* maritime boundary, which was argued to encompass more than the seabed alone, could be shown to exist by relying solely on evidence pertaining to activities conducted in connection with the latter.²²⁷ Third, in terms of

227. In *Peru v. Chile*, the ICJ stated that in determining the extent of a single maritime boundary, a consistent practice concerning fisheries was not deemed decisive either. See Case Concerning Maritime Dispute (Peru v. Chile), Judgment, 2014 I.C.J. Rep. 3, ¶ 111 (Jan. 27). Furthermore, another difficulty arises from interpreting an oil

geographical reach, the activities of Ghana were restricted to areas falling within the two hundred nm limit, putting into question what evidential weight such acts carry in proving the *de facto* existence of a maritime boundary also extending beyond two hundred nm.²²⁸

2. The Maritime Boundary Established by the Chamber

In regard to the primary issue in dispute, that of where the boundary lay between the two states, the Special Chamber plotted a maritime boundary for the territorial sea, EEZ, and continental shelf, also beyond two hundred nm, following largely a line that is equidistant from the adjacent coasts of the states concerned. The boundary, beginning at the point where the land boundary terminates, from that point onwards is more or less a straight boundary line (i.e., an unaltered equidistance line) extending up to a point beyond the two hundred nm limit.²²⁹

Those parts of the disputed area where Ghana had given concessions pursuant to which Tullow Oil was on the verge of exploitation were all considered to be under Ghana's exclusive jurisdiction. After the final ruling was delivered, Tullow Oil, by publishing a statement on its website, applauded the result,²³⁰ indicating that work would be resumed shortly. A consequence of the judgment of the Special Chamber is that the reach of certain previously issued concessions by both parties to the dispute would have to be revisited, as some of the blocks they issued straddle the newly established maritime boundary.²³¹ But, importantly, this did not

practice that is seemingly consistent: having the reach of concessions not extend beyond a certain line may be borne out by reasons different from recognition of a maritime boundary by a state. Restraint, or caution being exercised, by the parties to the dispute can be alternative motivations for having a concession not extend beyond a geographical point. *Ghana/Côte d'Ivoire* (Judgment), 17 ITLOS Rep. ¶¶ 215, 226.

228. Ghana's proclaimed legislation carried little weight, according to the Chamber, in assessing whether there was acquiescence on the part of Côte d'Ivoire; Ghana's legislation, in fact, did not make it clear that there was such pre-existing agreement. The submissions made by the two states to the Commission on the Limits of the Continental Shelf to assess the extent of their extended continental shelf entitlements held no value either in regard of the acquiescence contention. These submissions, containing an explicit disclaimer, in which they were excluded from affecting the underlying issue of maritime boundary delimitation, was for the Chamber sufficient reason to deny them any relevance in relation to assessing whether a *de facto* boundary existed. *Ghana/Côte d'Ivoire* (Judgment), 17 ITLOS Rep. ¶¶ 109, 163, 168, 219, 224.

concern areas in relation to which Ghana had begun exploration and exploitation activities.²³²

3. A Judgment on Delimitation: Constitutive or Declarative of Rights?

It is of note that on the issue of “the meaning of a judgment on the delimitation of the continental shelf,”²³³ the Chamber took a position at variance with those of the states involved. Where the parties to the dispute agreed that delimitation is of a *declarative* nature, although their views differed in relation to the consequences that followed from delimitation being declarative, the Chamber defined the nature of delimitation as consisting of both declarative and constitutive elements.²³⁴ Not only was this at variance with the positions of the states concerned, this is also at odds with previously rendered international case law. Looking at, for example, the *North Sea Continental Shelf* cases, the ICJ stated that delimitation is of a declarative nature: the undelimited continental shelf already belongs to the coastal state, meaning delimitation is not concerned with “the determination *de novo* of such an area.”²³⁵ Closely connected to this finding of the ICJ was the consideration that the sovereign rights the coastal state has over the continental shelf are inherent and flow automatically from the state having sovereignty over territory.²³⁶ Following on these lines set out by the ICJ, Côte d’Ivoire took the position that the aspect of exclusivity of sovereign rights is not dependent on when the maritime boundary is established.²³⁷

Rights of the coastal state to the continental shelf, being inherent and *ab initio*, would inevitably require a judgment of the Chamber to be declarative of these rights, in the view of Côte d’Ivoire. Under this logic, the rights a coastal state has over the continental shelf already exist, and so does their exclusiveness, also in relation to the disputed parts of a continental shelf. Through delimitation, the geographical extent of these rights is determined conclusively, subsequently opening up the possibility for states to act exclusively on these rights in relation to mineral resources in areas on its own side of the boundary. Inevitably, however, by allowing acts to proceed unilaterally in relation to the disputed continental shelf area, the aspect of exclusivity of a state’s rights would be breached.²³⁸

238. *See supra* Part V.A.

Against the backdrop of Côte d'Ivoire's contention that there is a general requirement of not conducting unilateral activities in a disputed maritime area,²³⁹ because the sovereign rights it enjoyed were exclusive in nature, Ghana contested the understanding that a delimitation is declarative in the way suggested by Côte d'Ivoire.²⁴⁰ In general, Ghana agreed that delimitation is necessarily declarative in nature; otherwise, the disputed area would be a *terra nullius*.²⁴¹ Although the states concerned were in agreement on delimitation being declarative of rights, this did not imply that Côte d'Ivoire was correct in arguing that its sovereign rights had been violated: "Ghana's operations over many decades in the now-disputed area" could not be considered breaches of these rights, according to Ghana.²⁴² Neither did the consequence of the *ab initio* and *ipso facto* character of sovereign rights over a continental shelf change this: "belatedly declaring" rights over the disputed area did not have a consequential effect such that previous lawfully undertaken conduct would now breach the sovereign rights of Côte d'Ivoire, even after the latter altered the extent of its claim to maritime zones.²⁴³ So, Ghana placed great emphasis on the argument that the acts it undertook related to an area that was not in dispute, tying in to its acquiescence accusation.²⁴⁴ Importantly, however, it did not dispute the aspect of exclusivity already attaching to a state's sovereign rights. Rather, Ghana argued that Côte d'Ivoire could not claim having such exclusivity, having forfeited its sovereign rights to areas falling on Ghana's side of the equidistance boundary due to acquiescence.²⁴⁵

The Chamber began its analysis with indicating where its view converged with those of the parties to the dispute, that is: the sovereign rights coastal states have over the continental shelf are exclusive and exist *ab initio*.²⁴⁶ The Chamber went on to recognize that the states concerned held similar views over the declarative nature of delimitation.²⁴⁷ However, characterizing delimitation as inherently declarative was false according to the Chamber, stating that delimitation "cannot be qualified as merely declarative,"²⁴⁸ but rather also possesses constitutive elements. Usually, these rights are

248. *Id.* ¶ 591.

considered to have an existence independent of delimitation, in that these rights also apply to a disputed part of the continental shelf.²⁴⁹ In this light, if another claimant holding a similar entitlement decides to act unilaterally on related rights prior to delimitation, the pre-existing rights of the other coastal state might be breached. However, the Chamber did not go along these lines of argument, stating that international law will only be breached by a state acting unilaterally in a disputed maritime area that lacks a good faith claim to the area concerned, as will be discussed in the next subpart.

Following the Chamber's finding that the continental shelf rights of coastal states are exclusive, and that the entitlement to a continental shelf is automatic, the Chamber discussed the issue of the nature of the judgment on the delimitation it was called upon to effect. A delimitation determines conclusively which parts of a disputed continental shelf area belong to which state, coming down to it giving preference to one state's entitlement over another.

Then, in light of assigning to delimitation both declarative and constitutive aspects, the Special Chamber assessed whether a claimant acting unilaterally in a disputed continental shelf area can incur international responsibility, as this Article will later discuss.

So, the reasoning of the Special Chamber challenges what seems to have been a widely held overall assumption: delimitation is *declarative* of pre-existing rights.²⁵⁰ In fact, the roots of the rather unconvincing reasoning of the Chamber that unfolds on the issue of international responsibility, as will be discussed next, can be retraced to this characterization of the nature of delimitation.

4. Were Paragraphs 1 and 3 of Article 83 of the LOSC Breached by Ghana?

In substantiating its argument that Ghana violated international law through its unilateral actions, Côte d'Ivoire invoked both paragraph 1 and paragraph 3 of Article 83 of the LOSC.²⁵¹ The Special Chamber in its analysis addressed whether any breaches of these paragraphs had occurred.

It started with answering the question of whether the claimed violation by Côte d'Ivoire of the obligation to negotiate in good faith, as was argued to be enshrined in paragraph 1 of Article 83 of the LOSC, could be upheld. The Chamber began by recognizing that there is a close tie between negotiations and delimitation, in that the former necessarily precedes the latter.²⁵² Negotiating was found to be a particularly appropriate vehicle when "States conduct maritime

251. Ghana/Côte d'Ivoire (Judgment), 17 ITLOS Rep. ¶ 596.

252. *Id.* ¶ 604.

activities in close proximity” to each other.²⁵³ As the obligation to negotiate is an obligation of conduct, a breach of paragraph 1 of Article 83 of the LOSC could, according to the Chamber, not be assumed if the “result expected” by one of the claimants is not met.²⁵⁴ Important in this regard was that Côte d’Ivoire failed to produce any evidence of several rounds of held negotiations spanning a six-year period not being conducted in a meaningful manner (i.e., they did not show a lack of good faith on the part of Ghana).²⁵⁵ Neither could the initial unwillingness of Ghana to bring the dispute to international adjudication be seen as breaching the obligation to negotiate in good faith.²⁵⁶ One reason for this is that Article 298 of the LOSC explicitly permits states to place certain types of disputes beyond the reach of binding dispute settlement.²⁵⁷ Therefore, Côte d’Ivoire seeking to maintain the existing *status quo* as it deemed to exist (i.e., that no unilateral economic conduct was taking place in the disputed area), and the unwillingness of Ghana to accede thereto, could not be seen as a breach of the obligation to negotiate in good faith.

The Chamber made it clear that two interrelated but separate obligations are set out in paragraph 3 of Article 83 of the LOSC.²⁵⁸ A further link was recognized to exist between the two obligations in the sense of the nature of obligation they lay down: both of these stipulated an obligation of conduct.²⁵⁹ The point at which paragraph 3 would become relevant according to the Special Chamber in *Ghana/Côte d’Ivoire* is when “the maritime delimitation dispute has been established.”²⁶⁰ This paragraph ceases to exert its relevance when states have effected “a final delimitation,” through the conclusion of a delimitation agreement, or when an international court or tribunal has delimited the maritime boundary.²⁶¹

The Special Chamber abstained from engaging in an in-depth analysis of the meaning of the positive obligation included to this aim in paragraph 3 of Article 83 of the LOSC. This was because Côte d’Ivoire did not frame any of its submissions along the lines of the breach of the obligation to seek provisional arrangements, although it made some reference to the obligation and breaches thereof in its pleadings.²⁶² However, the Chamber did elaborate on the content of this obligation in a broader sense by stating that it connotes an

“obligation of conduct”: the states concerned have to make good faith efforts to conclude provisional arrangements.²⁶³ The addition of the phrase “in a spirit of understanding and cooperation” was considered to “enhance” this obligation.²⁶⁴ However, it is not entirely clear how this obligation is “enhanced,” with the defining standard remaining that states have to make good faith efforts in setting up provisional arrangements successfully.

5. The Special Chamber’s Interpretation of the Obligation to Not Hamper or Jeopardize²⁶⁵

Due to the strong emphasis placed by Côte d’Ivoire on the obligation to not hamper or jeopardize, the Special Chamber began by addressing the issue of how to define the obligation’s underlying nature. As to determine whether the obligation to not hamper or jeopardize is an obligation of conduct (i.e., *pactum de contrahendo*) or result (i.e., *pactum de negotiando*), forming an understanding of the words of “shall make every effort” was regarded as critical by the Special Chamber. It interpreted this phrase as being applicable to both obligations in paragraph 3 of Article 83 of the LOSC.²⁶⁶ This was confirmed by the use of the word “and” linking the second limb of the sentence to its first part.²⁶⁷ By reaching the conclusion that there is a good faith component attached to the obligation to not hamper or jeopardize, the Special Chamber followed the line that the tribunal, in its award *Guyana v. Suriname*, set out earlier.²⁶⁸ Reinforcing this position is the literature, where the view regularly emerges that the obligation to not hamper or jeopardize is an obligation of conduct.²⁶⁹

Following the determination as to its nature, the Chamber acknowledged that the parties to the dispute vocalized different views in relation to two aspects connected to paragraph 3 and the obligation to not hamper or jeopardize as collected thereunder: first, whether it was breached; and, second, whether paragraph 3 would be applicable.²⁷⁰ After concluding earlier that the acquiescence claim could not succeed, the Chamber made it clear that a breach of

263. Ghana/Côte d’Ivoire (Judgment), 17 ITLOS Rep. ¶ 627.

264. *Id.*

265. *Id.* ¶ 629.

266. *Id.*

267. *Id.*

268. In this latter case, in pinpointing the nature of the negative obligation in paragraph 3 of Article 83 of the LOSC, the tribunal construed it as to make “every effort . . . not to jeopardise or hamper the reaching of the final agreement.” See *Guyana v. Suriname*, 30 R.I.A.A. 1, ¶ 465 (Perm. Ct. Arb. 2007).

269. See, e.g., Peter D. Cameron, *The Rules of Engagement: Developing Cross-Border Petroleum Deposits in the North Sea and the Caribbean*, 55 INT’L & COMP. L.Q. 559, 563 (2005); BILLC REPORT, *supra* note 5, at 21–22.

270. Ghana/Côte d’Ivoire (Judgment), 17 ITLOS Rep. ¶ 624.

paragraph 3 of Article 83 of the LOSC required a disputed continental shelf area in relation to which a unilateral act was undertaken.²⁷¹

The Special Chamber observed *obiter dictum* that although Ghana suspended new drilling in the disputed area, as it was ordered to do in the interim measures phase, “preferably” it would have done this earlier when Côte d’Ivoire previously requested this.²⁷² This statement probably has to be read as being in the nature of *lege ferenda*, rather than grounding in a legal obligation; the Chamber did not even order a stop to initiated drilling operations in the interim measures phase despite Côte d’Ivoire’s request to this aim.²⁷³

The circumstance that the areas where the unilateral conduct was undertaken were considered to be under the exclusive jurisdiction of Ghana, as they fell on its own side of the established boundary, inevitably had to carry great weight according to the Chamber.²⁷⁴ As a result, Côte d’Ivoire’s submission building on the view that the unilateral acts were undertaken “in the Ivorian maritime area”²⁷⁵ became meaningless according to the Chamber.²⁷⁶ Falling back on a formalist reasoning, by pointing to the fact that the areas were located on Ghana’s own side of the boundary, the Special Chamber made it clear that these areas could not be considered Ivorian; hence, its submission could not succeed.²⁷⁷ Judge Mensah, in his separate opinion, and in assessing whether paragraph 3 of Article 83 of the LOSC was breached, adopted a similar argument: given that the areas in question were attributed to Ghana in the final judgment, the issue of infringement was a *non-sequitur*.²⁷⁸

What is problematic with these findings is that both seem to operate on a misunderstanding of paragraph 3 of Article 83 of the LOSC: this paragraph is concerned with whether a unilateral act undertaken in a disputed continental shelf area, *during* the time that it was disputed, had an effect of hampering or jeopardizing reaching a delimitation agreement. Paragraph 3 is not concerned with whether this unilateral act in hindsight (i.e., *ex post facto*), with the newly acquired knowledge at one’s disposal of who has exclusive jurisdiction over the area because it lies on a state’s own side of the boundary, breached the obligation to not hamper or jeopardize. Hence, the way in which the Special Chamber interpreted paragraph 3 renders it

effectively meaningless; this is further enhanced by combining the reasoning in regard to whether international responsibility could be incurred with the Chamber's interpretation of paragraph 3 of Article 83 of the LOSC.²⁷⁹

6. Acting Unilaterally in Areas Brought under the Exclusive Jurisdiction of the Other Claimant: Can There Be International Responsibility?

After considering that the areas where the unilateral mineral resource activity had taken place were on Ghana's side of the boundary, the Special Chamber made it clear that the issue it needed to analyze was as follows: can international responsibility be engaged when unilateral acts have been "carried out in a part of the area attributed by the judgment to the other State[?]"²⁸⁰ Framed differently, the question was, can Ghana incur international responsibility for unilateral conduct in relation to the disputed continental shelf area that Côte d'Ivoire argued had resulted in a breach of its sovereign rights, particularly infringing on their exclusivity, even though in the final apportionment the areas were not located on the latter's side of the boundary?

In an earlier consideration, the Special Chamber acknowledged that Ghana's unilateral activities were, however, undertaken in what at the time could be considered the maritime area of dispute.²⁸¹ Judge Paik also emphasized this aspect in his separate opinion.²⁸² However, the importance attributed thereto, and the conclusion Judge Paik draws therefrom are very different from those of the Special Chamber.²⁸³

According to the Special Chamber, determining which parts of the disputed area belonged to either Ghana or Côte d'Ivoire through delimitation involved a prioritization of one coastal state's entitlement to a continental shelf over the entitlement of the other coastal state (i.e., there is a constitutive component to a delimitation²⁸⁴). In the following finding, the Special Chamber made it clear when international responsibility would be incurred due to a breach of a rule of international law, in case a state acts unilaterally in relation to a disputed continental shelf area:

279. See *infra* Part VI.

280. Ghana/Côte d'Ivoire (Judgment), 17 ITLOS Rep. ¶ 589.

281. *Id.* ¶ 588.

282. See *generally* Dispute Concerning Delimitation of the Maritime Boundary between Ghana and Côte d'Ivoire in the Atlantic Ocean (Ghana/Côte d'Ivoire), Case No. 23, Separate Opinion of Judge Paik, Sept. 23, 2017.

283. *Id.* For more on how the view of Judge Paik differed from the majority view, see *infra* Part V.C.7.

284. See *supra* Part V.B.5.

In the view of the Special Chamber, the consequence of the above is that maritime activities undertaken by a State in an area of the continental shelf which has been attributed to another State by an international judgment cannot be considered to be in violation of the sovereign rights of the latter if those activities were carried out before the judgment was delivered and if the area concerned was the subject of claims made in good faith by both States.²⁸⁵

One implication of this finding is that if a state has acted unilaterally in a part of a disputed continental shelf area prior to delimitation, and that area is ultimately considered to be under the exclusive jurisdiction of the acting state, there can be no violation of the sovereign rights of the other coastal state, which claimed entitlements over the same area prior to delimitation but to whom the area was not attributed after a delimitation judgment.²⁸⁶

The same holding also implies that the possibility for incurring international responsibility by a state acting unilaterally prior to delimitation is extremely limited. As long as the area where the act occurred was claimed in good faith by the state acting unilaterally, it will avoid responsibility; this is even if the area falls on the side of the boundary of the other state after delimitation.

The Special Chamber found judicial authority for this view in the ICJ's ruling in *Territorial and Maritime Dispute (Nicaragua v. Colombia)*.²⁸⁷ This case involved Nicaragua requesting the ICJ for a declaration containing that "Colombia is not acting in accordance with her obligations under international law by stopping and otherwise hindering Nicaragua from accessing and disposing of her natural resources to the east of the 82nd meridian."²⁸⁸ Colombia contested this assertion. One of the grounds it invoked was that states do not claim reparation for acts that were conducted previously (i.e., prior to final settlement) in a disputed area if the area involved is ultimately established to be located on the side of the boundary of the state that acted unilaterally.²⁸⁹ Ghana also relied on this holding, in the context of its argument that international responsibility cannot be incurred from carrying out activities to which Côte d'Ivoire had acquiesced.²⁹⁰

The ICJ in *Territorial and Maritime Dispute (Nicaragua v. Colombia)* was unwilling to provide the declaration requested by Nicaragua, to the effect that Colombia's acts undertaken in a disputed maritime area were declared unlawful from the view of international law. In its analysis, the ICJ placed special emphasis on the fact that

290. Reply of Ghana, Volume I, Dispute Concerning Delimitation of the Maritime Boundary between Ghana and Côte d'Ivoire in the Atlantic Ocean (Ghana/Côte d'Ivoire), Case No. 23, July 25, 2016, at 142–43.

different parts of the area in dispute were considered to be under the jurisdiction of the different states involved.²⁹¹

By way of contrast, in the maritime boundary dispute between Ghana and Côte d'Ivoire, the areas where exploitation activities in the disputed maritime area were undertaken were in the final apportionment all considered to be under the exclusive jurisdiction of Ghana. The following consequence followed from applying the finding of the ICJ in *Territorial and Maritime Dispute (Nicaragua v. Colombia)* by analogy to the dispute between Ghana and Côte d'Ivoire: even if the areas in relation to which Ghana was on the verge of producing mineral resources would have been considered to be under the jurisdiction of Côte d'Ivoire, there would have been no violation of its sovereign rights.²⁹²

To use the Chamber's own words, this would be no different "even assuming that some of those activities took place in areas attributed to Côte d'Ivoire by the present Judgment."²⁹³ In light of the fact that the areas did not fall on Côte d'Ivoire's side of the established boundary, it is not entirely clear why the Special Chamber *obiter dictum* stated that this would have not been different if the area would have been considered to be under Côte d'Ivoire's exclusive jurisdiction after delimitation; in fact, this seems to have been a largely unnecessary statement of the Chamber.

And the ruling on this point constitutes a clear break with what the Special Chamber itself held in the interim measures phase, where a risk of irreparability was tied to the area where Ghana undertook the unilateral acts in relation to mineral resources being placed under Côte d'Ivoire's exclusive jurisdiction; this earlier recognized risk now did no longer exist. Perhaps this is more easily explained by the fact that there now is an established maritime boundary.

But there is another difficulty with how the Special Chamber framed its reasoning, particularly in light of it recognizing that the coastal state has *ab initio* rights to the continental shelf.²⁹⁴ The Chamber then subsequently assumed that there will be no breach of these rights prior to delimitation in the following case: if a part of the continental shelf is in dispute and claimed in good faith by a claimant acting unilaterally, there will not be a breach of another claimant's rights before or after delimitation. The logic laid out here by the Chamber seemingly can only really stand up to scrutiny if the states concerned *do not* have pre-existing rights to the disputed area, due to delimitation being constitutive of these rights for states; this is a view that was prior to this judgment highly uncommon.

7. The Separate Opinion of Judge Paik: The Neglected Importance of the Obligation to Not Hamper or Jeopardize

The separate opinion of Judge Paik contributes to a better understanding of what the content of the obligation to not hamper or jeopardize delimitation consists of. In this opinion, he discussed the modalities of paragraph 3 of Article 83 of the LOSC in some detail. What motivated Judge Paik to write this opinion was that the Chamber neglected the relevance and practical importance of this obligation in framing its decision.

Nonetheless, Judge Paik did not vote in favor of Côte d'Ivoire's submission that paragraph 3 of Article 83 of the LOSC was breached. The formulation of Côte d'Ivoire's submission on this point, referring to the disputed area as exclusively belonging to Côte d'Ivoire, enabled him to follow the unanimous decision that Ghana had not breached paragraph 3 of Article 83 of the LOSC.²⁹⁵ With the benefit of hindsight, the unilateral conduct occurred in an area that could not be considered Ivorian.²⁹⁶ Judge Paik made it clear that he would not have followed the majority's view had Côte d'Ivoire's submission been worded differently.²⁹⁷ However, Judge Paik expressed his reservations in relation to how the Chamber treated paragraph 3 of Article 83 of the LOSC in a more general sense.

First, the Chamber, through how it framed its judgment, brushed over the general importance and practical relevance of the obligation to not hamper or jeopardize delimitation, according to Judge Paik.²⁹⁸ And, second, he was not convinced of "the lawfulness of Ghana's activities in the disputed area in terms of article 83, paragraph 3, of the Convention."²⁹⁹ After acknowledging there are two separate obligations in paragraph 3, geared respectively towards cooperation and abstention, Judge Paik exclusively directed his attention at the obligation to not hamper or jeopardize.³⁰⁰ The importance of this obligation was signified by the assertion that it embodies "a fundamental duty of restraint,"³⁰¹ carrying significant "weight as a fundamental norm."³⁰² Further, the obligation to not hamper or jeopardize serves a significant practical purpose in light of disputed

302. *Id.*

continental shelves being regular features in the international landscape.³⁰³ Judge Paik, despite acknowledging that the obligation is “scant in substance,” thought it to have been deserving of further clarification in this judgment.³⁰⁴ However, the Special Chamber passed on the chance of offering welcome guidance on the content of this obligation.

In analyzing the meaning of the obligation to not hamper or jeopardize, Judge Paik started with indicating where a point of agreement with the judgment of the Special Chamber lies: the nature of the obligation to not hamper or jeopardize is not one of result, but rather an obligation of conduct.³⁰⁵ In an attempt to circumscribe the nature of an obligation of conduct, Judge Paik adopted the line of approach set out in the *Responsibilities and Obligations of States Sponsoring Persons with Respect to Activities in the Area*.³⁰⁶ states must do their utmost to achieve the aim sought after by a provision.³⁰⁷ On the issue of the extent of the limitation imposed by the obligation to not hamper or jeopardize on the possibility to act unilaterally, it was abundantly clear in the view of Judge Paik that a moratorium was not meant to be introduced.³⁰⁸ This aspect was borne out by both the language of paragraph 3 of Article 83 of the LOSC and its negotiating history.³⁰⁹ As a result, Côte d’Ivoire’s contention that “activities by the States concerned” in a disputed maritime area must be abjured in a comprehensive sense could not succeed.³¹⁰ As regards to how the obligation to not hamper or jeopardize delimitation interacts with the obligation to seek provisional arrangements, both being collected under the same paragraph 3, Judge Paik held that the obligation to not hamper or jeopardize would “be particularly relevant” where there are no provisional arrangements into effect, or when the arrangement in question is not comprehensive in nature.³¹¹ Most provisional arrangements are not comprehensive in scope, however, keeping alive the possibility of conflict arising concerning those types of acts that are unregulated by these arrangements.

The question of what acts are captured under this obligation’s reach takes on a particular urgency in light of there being no elaboration on what unilateral acts exert an effect of hampering or

308. *Id.* ¶ 5.

309. *Id.*

310. *Id.*

311. *Id.*

jeopardizing. According to Judge Paik, deciding what unilateral conduct is (un)lawful in the disputed maritime area involved had to be measured by the impact made on the chances of successfully reaching a delimitation, or on negotiations if they are being, or have been, pursued to that end. Construed thus, a breach of the obligation to not hamper or jeopardize becomes entwined to the circumstances at hand.³¹² This aspect of the specific situation present in a disputed area is what rendered the distinguishing between lawful and unlawful acts *in abstracto* a futile exercise, in the view of Judge Paik.

Despite acknowledging the dependency of this assessment on the specific circumstances of a disputed maritime area, some measure of approximation of this scope is possible: but the caveat is that an act is *likely* to be lawful or unlawful, but no absolute determinations can be made. With regard to acts resulting in “a permanent physical change to the marine environment,”³¹³ chances are that they have an effect of prejudicing the final agreement. However, activities effecting change falling short thereof, can just as well have an effect of hampering or jeopardizing.³¹⁴ Therefore, holding the causation of permanent physical change to be the defining standard against which to measure the lawfulness of a unilateral act is misplaced. Rather, this criterion forms one “relevant factor” among “several” influencing the scope for unilateralism in relation to a disputed continental shelf area. And there is also no hierarchical ordering between these factors. So, the threshold of “a permanent physical change to the marine environment” does not necessarily prevail over any other factors that can be identified.³¹⁵ Judge Paik, who focused mainly on the unilateral act as such, and the effects it exerted on a particular maritime boundary dispute, subsequently adduced a list of relevant factors: “type, nature, location, and time” combined with the “manner in which they are carried out” are all relevant in ascertaining whether a unilateral act is reconcilable with the obligation to not hamper or jeopardize.³¹⁶

Ghana must have become fully aware that there was a dispute with Côte d’Ivoire at some moment in time, certainly no later than in 2009.³¹⁷ Rather than subsequently adopting a posture of restraint, which seemed necessary, Ghana stepped up the frequency with which it undertook activities within the disputed maritime area; this

317. *Id.* ¶ 11.

intensification was in the view of Judge Paik not reconcilable with the obligation to not hamper or jeopardize delimitation.³¹⁸

Ghana's unilateral activities were undertaken in areas that were *ex post facto* considered to be under its exclusive jurisdiction (i.e., they fell on Ghana's side of the boundary line); however, this aspect should according to Judge Paik not factor into the determination of breach of the obligation to not hamper or jeopardize. Lying behind this argument was the assumption that paragraph 3 of Article 83 of the LOSC applies exclusively to the period *preceding* continental shelf delimitation; therefore, assessing whether a unilateral act breaches the paragraph must be fully set in the moment of the act being undertaken.³¹⁹

Taking the opposite view, that a unilateral act undertaken in a disputed maritime area loses its unlawful character depending on whether that part of the area is placed under that state's jurisdiction after delimitation, would deprive the obligation to not hamper or jeopardize delimitation of the continental shelf of the main aim that it is meant to serve:³²⁰ ensuring that unilateral acts undertaken pending delimitation do not hamper or jeopardize the success of reaching the final delimitation.

VI. THE IMPLICATIONS OF *GHANA / CÔTE D'IVOIRE* FOR THE RIGHTS AND OBLIGATIONS OF STATES IN DISPUTED MARITIME AREAS: A MUDDYING OF THE WATERS?

A key determinant for the relevance of the judgment of the Special Chamber in relation to the issue of the scope that remains for unilateralism in disputed maritime areas concerning mineral resources was the success of Ghana's acquiescence claim. This line of argument did not convince the Special Chamber, however: the evidence adduced fell short of meeting the required threshold of being compelling.³²¹

As a result, the judgment can be analyzed through the lens of the added value for determining the rights and obligations states have in relation to a disputed continental shelf area. Now, to revert to the main question this Article sought to answer: what lessons can be learned from the maritime boundary dispute between Ghana and Côte d'Ivoire in relation to the issue of what the rights and obligations are of states in disputed continental shelf areas, and in relation to what scope is reserved for unilateral conduct to access the mineral resources located therein?

Ghana's moving to the advanced stage of being on the verge of taking wells in a disputed area into production makes this case the first in its kind: an international court and tribunal was asked to rule

318. *Id.*

319. *Id.* ¶ 17.

320. *Id.*

321. *See supra* Part V.C.1.

on the lawfulness of a state being close to exploiting mineral resources from a disputed maritime area, as well as on the lawfulness of the preliminary acts undertaken enabling Ghana to progress to this stage. Based on the previous case law, the following answer was likely to be given to the question about how to view the unilateral acts of Ghana from the perspective of international law: these activities are unlawful, given that exploratory and exploitation drilling result in irreparable damage to the rights of the other claimant, combined with that it would significantly risk damaging the marine environment, modifying the characteristics of the seabed to a degree that the resultant damage would be irreparable.

In the interim measures phase, signs of a break with previous case law started to first emerge. The Chamber, falling short of suspending all drilling,³²² ordered Ghana to abstain only from new drilling in the disputed maritime area. Leaving those operations already set in motion unaffected was motivated by other environmental considerations and financial repercussions simultaneously in play, which both argued against this, according to the Chamber. In its interim measures order, the Chamber recognized that “exploration and exploitation activities” raised the threat of irreparability to rights; a right to information existing for the coastal state in relation to the composition of the continental shelf similarly was considered to be under threat.³²³ By recognizing a risk of irreparability to flow from the unilateral collection of information, in this regard, the order of the Special Chamber went beyond what was earlier held in case law. This risk of irreparability coming to fruition was, in the interim measures phase, tied to the area under consideration ultimately being under Côte d’Ivoire’s exclusive jurisdiction. At first glance, the view espoused here by the Chamber shows some resemblance to *Aegean Sea Continental Shelf (interim measures)*, where the ICJ in its decision held that a risk of irreparable prejudice engendered by unilateral seismic work was dependent on the area where the work took place to be considered under the exclusive jurisdiction of Greece.³²⁴ However, and importantly, the ICJ thought this line of reasoning could only be applied to seismic work, not to exploratory drilling and exploitation activities, including bringing installations into position.³²⁵ In the view of the ICJ, had one of these latter categories of unilateral activity been

322. Two of the several requests made by Côte d’Ivoire were: first, ordering Ghana to abort operations in the disputed area completely; and, second, ordering Ghana not to award any new permits to the petroleum industry that intruded upon the disputed area for the duration of the Chamber not having handed down its ruling on the merits. *See, e.g., Dispute Concerning Delimitation of the Maritime Boundary between Ghana and Côte d’Ivoire in the Atlantic Ocean (Ghana/Côte d’Ivoire)*, Case No. 23, Provisional Measures, Order of Apr. 25, 2015, 15 ITLOS Rep. 146, ¶ 25.

323. *Id.* ¶¶ 94–95; *see supra* Part IV.C.

324. *Aegean Sea Continental Shelf Case (Greece v. Turkey)*, Request for the Indication of Interim Measures of Protection, Order, 1976 I.C.J. Rep. 3, ¶ 31 (Sept. 11).

325. *Id.* ¶ 30.

undertaken, it would have offered interim protection to the end of prohibiting these types of acts from being undertaken *pendente litis*.

These deviations from the previous case law have become more pronounced in the judgment on the merits. Parts of the judgment on the merits are (similarly) largely irreconcilable with what was held in the interim measures phase. While earlier recognizing a danger of causing irreparable prejudice to rights,³²⁶ the materialization of this risk would result from the following unilateral activities: gathering information, and conducting exploration and exploitation activities.³²⁷ Although none of the areas in dispute fell on Côte d'Ivoire's side of the established boundary, the Special Chamber addressed *obiter dictum* as to when a breach of the sovereign rights of Côte d'Ivoire, possibly incurring international responsibility, would have occurred: this would be limited to if a claimant lacking a good faith claim over the disputed area would act in connection therewith unilaterally.

Ghana contended that acts in relation to mineral resources formed part of the *status quo* existing between itself and Côte d'Ivoire; being a constituent part thereof, they could not be assumed to have an effect of hampering or jeopardizing delimitation.³²⁸ The main element having shaped the current and relevant *status quo* was, in the view of Ghana, Côte d'Ivoire's acquiescence, with the result that the undertaken acts had become an integral part of this status quo; hence, there could be no breach of paragraph 3 of Article 83 of the LOSC.

The treatment the Special Chamber gave to paragraph 3 was minimal, dismissing the paragraph's relevance based on a highly formalistic reasoning. After pronouncing itself on the nature of the obligation (i.e., forming an obligation of conduct) and stating that it is predominantly relevant in the absence of agreed provisional arrangements, the analysis of the Chamber in terms of paragraph 3 of Article 83 of the LOSC does not progress much beyond this point; this was due to the way in which Côte d'Ivoire committed its submission to paper.³²⁹ Given that the paragraph applies in areas of disputed continental shelf, framing its submission in terms of the assertion that these acts occurred with the maritime zones of Côte d'Ivoire could be easily brushed aside as anticipating events which would have yet to come to pass, or perhaps not at all if the area was attributed to Ghana, as it ultimately was. Hence, this framing by Côte d'Ivoire of its submission that Ghana's unilateral acts occurred in the "Ivorian maritime area" was unfortunate. Yet the submission of Côte d'Ivoire

326. Ghana/Côte d'Ivoire (Provisional Measures), 15 ITLOS Rep. ¶¶ 94–95.

327. *Id.* ¶¶ 95–96.

328. Reply of Ghana, Volume I, Dispute Concerning Delimitation of the Maritime Boundary between Ghana and Côte d'Ivoire in the Atlantic Ocean (Ghana/Côte d'Ivoire), Case No. 23, July 25, 2016, at 137.

329. Dispute Concerning Delimitation of the Maritime Boundary between Ghana and Côte d'Ivoire in the Atlantic Ocean (Ghana/Côte d'Ivoire), Case No. 23, Judgment of Sept. 23, 2017, 17 ITLOS Rep. 1, ¶¶ 62, 561, 598, 606, 633.

was concerned with a larger area than the area up to the equidistance boundary line as determined by the Chamber. Therefore, dismissing Côte d'Ivoire's submission on the ground that it was mainly concerned with the area up to the equidistance line cannot completely convince in the view of this author.³³⁰

To dismiss the relevance of this paragraph on the ground of the area in question not being ultimately considered to be on Côte d'Ivoire's side of the established boundary roots in a misunderstanding of paragraph 3 of Article 83 of the LOSC by the Chamber. This is because the paragraph is not meant to function as a tool to determine *ex post facto* (i.e., after delimitation) the lawfulness of a unilateral acts undertaken prior thereto, by setting this determination in the time of it becoming clear where the boundary lies. Rather, paragraph 3 is meant to exert its relevance prior to delimitation: pursuant to which acts undertaken unilaterally *prior* to delimitation, and which have an effect of hampering or jeopardizing the final delimitation can be considered unlawful. The unconvincing interpretation of the Special Chamber of paragraph 3 seems to be entwined with another unconvincing set of considerations with regard to whether international responsibility could be incurred.³³¹ In turn, both the elements—that there was no breach of the obligation to not hamper or jeopardize nor was international responsibility incurred for violations alleged by Côte d'Ivoire on its sovereign rights through Ghana's unilateral acts—can be considered to be connected with the Special Chamber's finding that delimitation is not exclusively declarative.³³²

Had Côte d'Ivoire's submission been framed differently, Judge Paik indicated he would have voted in favor of a breach of paragraph 3 of Article 83 of the LOSC. Yet a broader question is how likely would it have been that the ultimate outcome of the majority's decision would have been similarly different, had the submission been worded differently? The Chamber's analysis on the point of incurring international responsibility provides for a bleak forecast that this would have been the case. Although, from the perspective of logic, it would have made more sense to discuss the aspect of whether paragraph 3 of Article 83 of the LOSC was breached before the Special Chamber addressed the issue of international responsibility, its analysis of paragraph 3 was reserved to a later point in the judgment. By placing this analysis *after* dealing with the issue of international responsibility, the Chamber seems to suggest that international

330. On this issue, see generally Atsuko Kanehara, *A Legal and Practical Arrangement of Disputes Concerning Maritime Boundaries Pending their Final Solution and Law Enforcement: From a Japanese Perspective*, in *SERVING THE RULE OF INTERNATIONAL MARITIME LAW: ESSAYS IN HONOUR OF PROFESSOR DAVID JOSEPH ATTARD* 95 (Norman. A. Martínez Gutiérrez ed., 2010).

331. See *supra* Part V.C.6.

332. See *supra* Part V.C.3.

responsibility could not have been incurred by breaching this paragraph.

The obligation to not hamper or jeopardize imposes a *de facto*, not *de jure* limitation on when claimed rights may be put to actual use by coastal states in a disputed area. Yet the practical possibility for claimant states to undertake unilateral acts in relation to disputed EEZ or continental shelf areas is reduced to those acts conforming to the obligation to not hamper or jeopardize.³³³ The existence of pre-existing rights to the disputed maritime area of coastal states, which can be breached, is the precondition on which paragraph 3 of Article 83 of the LOSC operates. What the Special Chamber seemingly failed to recognize, however, is that the extent to which claimants can exercise sovereign rights over the disputed continental shelf area prior to delimitation is largely governed by paragraph 3. So, construed thus, the argument can be made that it would have been essential for the Special Chamber to address the meaning of paragraph 3 in light of Côte d'Ivoire's contention that its sovereign rights were infringed upon, because of the unilateral acts undertaken by Ghana, irrespective of Côte d'Ivoire's failure to directly contend that paragraph 3 was breached in this particular way.

The Special Chamber seems to employ a different definition of delimitation being constitutive than used in earlier case law. Departing from the view that delimitation is merely declarative of rights, it assigns to delimitation a dual nature in that it carries both constitutive and declarative aspects. A difficulty with this view is disentangling those parts of delimitation that are declarative in nature from those that are constitutive; for example, is delimitation constitutive of the rights coastal states have over the continental shelf, rendering, as Ghana suggested in its pleadings, a disputed maritime area essentially *terra nullius* prior thereto; or, rather, is perhaps the feature of the exclusive character of rights entwined with completing a delimitation?

Looking at the reasoning that unfolded after the Special Chamber construed the nature of delimitation as being composed of both declarative and constitutive components, particularly concerning international responsibility and whether paragraph 3 of Article 83 of the LOSC was breached, strongly suggests that the Special Chamber considers delimitation to be mainly constitutive of rights.³³⁴ This is because the outcome of the Chamber's decision on these two points is difficult to reconcile with delimitation indeed being declarative of pre-existing rights; in other words, sovereign rights for coastal states do not seem to exist, or alternatively cannot be breached, which seems to undercut the essence of possessing rights.

333. See Van Logchem *Unilateralism*, *supra* note 3, at 195 (saying the obligation puts limitations on the scope of unilateral activities allowed in areas of overlapping claims).

334. See *supra* Part V.C.3.

Perhaps, however, an alternative explanation might be that the Special Chamber construed the relation between having an entitlement to a continental shelf and the Chamber's delimitation judgment as that related rights will become exclusive in nature once the maritime boundary has been established by the Chamber. Under that view, prior to delimitation there is a coexistence of rights with none of the states concerned being able to fall back on their exclusive nature; in a way there would be a cancelling out of this aspect of exclusiveness due to these co-existing sets of rights. The final judgment will clarify the exact extent of a state's sovereign rights over the continental shelf, whereby the coastal state's exercise of these related rights will become complete. On this interpretation, the constitutive aspect of the judgment would lie in that the exercise of a coastal state's sovereign rights is no longer qualified due to another coastal state claiming similar rights, but that after delimitation it can fully exercise these rights in areas considered to be under the exclusive jurisdiction of one coastal state.

However that may be, what remains highly unsatisfactory with the judgment of the Chamber is when international responsibility can be engaged for unilateral acts undertaken in relation to a disputed continental shelf area: the sovereign rights the coastal state has over the continental shelf, which are *ab initio* and *ipso facto*, cannot be breached by another claimant state unless it lacks a good faith claim over a disputed maritime area, putting into question how inherent and exclusive these rights really are.

By assigning delimitation at least partly a constitutive effect, the Special Chamber does not render the disputed area "no one's waters"; this is because having an entitlement to the continental shelf area shapes the possibility to act in relation thereto. Instead, the Chamber renders the area as waters in relation to which claimants holding a good faith claim can act freely and without the threat of incurring responsibility *ex post facto*, for acting during the time that the area is disputed. According to the Chamber, if a state has a good faith claim, no international responsibility will be incurred, even if *ex post facto* the area is located on the side of the boundary of the other nonacting, coastal state.³³⁵

Because of delimitation's partial constitutive nature, as the reasoning of the Chamber implies, paragraph 3 of Article 83 of the LOSC is seemingly also deprived of much significance: breaching the obligation to not hamper or jeopardize is tied to when a state, lacking a good faith claim, would act unilaterally in relation to a disputed maritime area. This can function as an incentive for unilateral action by states with good faith claims in such disputed maritime areas, leading to the question whether the direction established by the

335. Dispute Concerning Delimitation of the Maritime Boundary between Ghana and Côte d'Ivoire in the Atlantic Ocean (Ghana/Côte d'Ivoire), Case No. 23, Judgment of Sept. 23, 2017, 17 ITLOS Rep. 1, ¶ 592.

Special Chamber is commendable in dealing with such areas, which will be explored next.

VII. CONCLUDING REMARKS ON BROADER IMPLICATIONS FOR DISPUTED MARITIME AREAS: DOES THE JUDGMENT PROVIDE CAUSE FOR ALARM?

Broader (adverse) consequences may flow from the judgment of the Special Chamber. A source for concern is that the Special Chamber has provided a state that wants to undertake acts unilaterally within a disputed continental shelf area with the judicial authority to do so. An implication of setting the threshold as to whether a unilateral act can be lawfully undertaken at when that part of the disputed maritime area is claimed in good faith by the state means that a unilateral act can practically always proceed in relation to a disputed continental shelf area, seemingly without incurring international responsibility; this is even if the area after delimitation is part of the other claimant's maritime zone.

Other effects that might follow from a claimant undertaking acts unilaterally, including detrimental effects on the bilateral relations between states are, for example, excluded from consideration by following this new "path" of the Chamber. Focusing exclusively on the validity of the claim of a coastal state implies that all other arguments arguing in favor of adopting more restraint in such areas—including that unilateral acts concerning mineral resources are regularly highly controversial, may prompt protests, and may breed new acts of unilateralism in response—are excluded by the Chamber as relevant considerations. The aspect of preserving the exclusivity that is attached to states' sovereign rights over the continental shelf, and the resources contained therein, was not deemed a relevant consideration by the Chamber.³³⁶

Merely requiring that the area is claimed in good faith is not a very demanding requirement. It significantly lowers the bar for states seeking to act unilaterally in relation to a disputed continental shelf area. Following this argument, in a more general sense and by applying it by analogy to other disputed maritime areas, particularly those that regularly create conflict and where unilateral acts are recurrent sources of tension between claimant states, the reasoning of the Special Chamber cannot but have negative effects. This is especially true because it effectively offers the claimant states concerned a *carte blanche* to act unilaterally in relation to their disputed continental shelf area.

Whether the judgment of the Special Chamber is a sign of a significant shift in the wrong direction remains to be seen, however. Or, rather, an alternative argument would be that the specifics of the

dispute between Ghana and Côte d'Ivoire were of such central importance in shaping the outcome of the judgment of the Chamber that drawing more general conclusions as to the state of international law in relation to disputed maritime areas from it is inappropriate. Particularly, the aspect that Ghana was already in a very advanced stage of development of the disputed maritime area, being close to production, is relevant under this view. Had the Chamber ruled differently, serious financial consequences might have followed for Ghana and its concessionaires. Investors would inevitably pull out from earlier commitments, which would lead to the abandonment of all development of mineral resources in the near future, and would also leave the equipment already moved into place to deteriorate up to a point where it could no longer properly function.

The next judgment that can add to the discussion as to the issue of what the rights and obligations are of states in disputed maritime areas, and which might offer a better indication in which direction judicial opinion is moving, is perhaps the maritime boundary dispute between Kenya and Somalia, where the latter complained of the unlawfulness of unilateral acts undertaken by Kenya.³³⁷ A return to the line set out previously in *Guyana v. Suriname*, although also flawed on certain points, is very much preferable to following the Chamber's judgment in *Ghana/Côte d'Ivoire*.
